
Native Dengue Virus Type 2
Catalog # ABD14442**Specification**

Native Dengue Virus Type 2 - Product Information

Application E

Native Dengue Virus Type 2 - Additional Information**Target/Specificity**

Native Dengue Virus Type 2 is a preparation of viral particles concentrated from tissue culture supernatant. Dengue Virus Type 2 is one of four antigenically distinct yet closely related viral serotypes belonging to the family Flaviviridae known to cause Dengue fever in humans. Dengue infection is a major cause of morbidity in tropical and subtropical regions. It is a mosquito borne viral infection that may be asymptomatic or may cause undifferentiated fever, dengue fever, dengue haemorrhagic fever or dengue shock syndrome. Currently, there is no vaccine or effective antiviral drugs to treat the infection.

Precautions

Native Dengue Virus Type 2 is for research use only and not for use in diagnostic or therapeutic procedures.

Native Dengue Virus Type 2 - Protocols

Provided below are standard protocols that you may find useful for product applications.
