

Histone H2A.X Antibody (S139)
Purified Rabbit Polyclonal Antibody (Pab)
Catalog # AE1016a**Specification**

Histone H2A.X Antibody (S139) - Product Information

Application	WB, IHC, IF
Primary Accession	P16104
Reactivity	Human
Host	Rabbit
Clonality	Polyclonal
Concentration	1mg/ml
Isotype	Rabbit IgG
Calculated MW	15145

Histone H2A.X Antibody (S139) - Additional Information**Gene ID** 3014**Other Names**

Histone H2AX, H2a/x, Histone H2AX, H2AFX, H2AX

Target/Specificity

The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen.

Dilution

WB~~1:500~1:1000

IHC~~1:50~1:100

IF~~1:100~200

Format

affinity Purified IgG, in PBS, 0.02% sodium azide and 50% glycerol.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions

Histone H2A.X Antibody (S139) is for research use only and not for use in diagnostic or therapeutic procedures.

Histone H2A.X Antibody (S139) - Protein Information**Name** H2AX ([HGNC:4739](#))**Function**

Variant histone H2A which replaces conventional H2A in a subset of nucleosomes. Nucleosomes wrap and compact DNA into chromatin, limiting DNA accessibility to the cellular machineries which require DNA as a template. Histones thereby play a central role in transcription regulation, DNA repair, DNA replication and chromosomal stability. DNA accessibility is regulated via a complex set of post- translational modifications of histones, also called histone code, and nucleosome remodeling. Required for checkpoint-mediated arrest of cell cycle progression in response to low doses of ionizing radiation and for efficient repair of DNA double strand breaks (DSBs) specifically when modified by C-terminal phosphorylation.

Cellular Location

Nucleus. Chromosome

Histone H2A.X Antibody (S139) - Protocols

Provided below are standard protocols that you may find useful for product applications.

- [Western Blot](#)
- [Blocking Peptides](#)
- [Dot Blot](#)
- [Immunohistochemistry](#)
- [Immunofluorescence](#)
- [Immunoprecipitation](#)
- [Flow Cytometry](#)

Histone H2A.X Antibody (S139) - Images

Western blot analysis of extract from 293 cells untreated or treated with UV, using Histone H2A.X Antibody (S139) (#AE1016a, Lane 1 and 2) and Phospho-Histone H2A.X -S139 Antibody (#AE1016b, Lane 3 and 4).

Immunohistochemical analysis of paraffin- embedded human breast carcinoma tissue using Histone H2A.X Antibody (S139) (#AE1016a).

Immunofluorescence staining of methanol-fixed HeLa cells using Histone H2A.X Antibody (S139) (#AE1016a, Red).

Histone H2A.X Antibody (S139) - Background

Histones are basic nuclear proteins that are responsible for the nucleosome structure of the chromosomal fiber in eukaryotes. Two molecules of each of the four core histones (H2A, H2B, H3, and H4) form an octamer, around which approximately 146 bp of DNA is wrapped in repeating units, called nucleosomes. The linker histone, H1, interacts with linker DNA between nucleosomes and functions in the compaction of chromatin into higher order structures. This gene encodes a member of the histone H2A family, and generates two transcripts through the use of the conserved stem-loop termination motif, and the polyA addition motif.
