

Phospho-ThrDARPP-32 Antibody

Affinity purified rabbit polyclonal antibody Catalog # AN1006

Specification

Phospho-ThrDARPP-32 Antibody - Product Information

Application Primary Accession Reactivity Predicted Host Clonality Calculated MW WB <u>Q6J4I0</u> Rat Bovine, Chicken, Human, Mouse, Monkey Rabbit polyclonal 32 KDa

Phospho-ThrDARPP-32 Antibody - Additional Information

Gene ID360616Gene NamePPP1R1BOther NamesProtein phosphatase 1 regulatory subunit 1B, DARPP-32, Dopamine- and cAMP-regulated neuronalphosphoprotein, Ppp1r1b

Target/Specificity

Synthetic phospho-peptide corresponding to amino acid residues surrounding Thr75 conjugated to KLH.

Dilution WB~~ 1:1000

Format

Prepared from rabbit serum by affinity purification via sequential chromatography on phosphoand dephosphopeptide affinity columns.

Antibody Specificity

Specific for the \sim 32k DARPP-32 protein phosphorylated at Thr75. Immunolabeling is blocked by λ -phosphatase treatment.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions

Phospho-ThrDARPP-32 Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

Shipping Blue Ice

Phospho-ThrDARPP-32 Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- <u>Western Blot</u>
- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- Cell Culture

Phospho-ThrDARPP-32 Antibody - Images

Western blot of rat caudate lysate showing specific immunolabeling of the ~32k DARPP-32 phosphorylated at Thr75 (Control). The phosphospecificity of this labeling is shown in the second lane (lambda-phosphatase: λ -Ptase). The blot is identical to the control except thwas incubated in λ -Ptase (1200 units for 30 min) before being exposed to the Anti-Thr75 DARPP-32.The immunolabeling is completely eliminated by treatment with λ -Ptase.

Phospho-ThrDARPP-32 Antibody - Background

DARPP-32 is a dopamine (DA) and cAMP-regulated ~32k phosphoprotein that is associated with dopaminoceptive neurons (Fienberg et al., 1998). The protein inhibits protein phosphatase I when it is phosphorylated on Thr34. In contrast, when DARPP-32 is phosphorylateThr75 the protein acts as an inhibitor of PKA (Bibb et al., 1999). Phosphorylation of DARPP-32 is thougto play a critical role in the regulation of dopaminergic neurotransmission. In addition, the activity of DARPP-32 is also thought to play important roles in the actions of alcohol, caffeine and Prozac® (Maet al., 2002; Lindskog et al., 2002; Svenningsson et al., 2002).
