

Ubiquitin C Terminal Hydrolase 1 (UCHL1) Antibody
Chicken polyclonal antibody
Catalog # AN1158**Specification**

Ubiquitin C Terminal Hydrolase 1 (UCHL1) Antibody - Product Information

Application	WB, IF
Primary Accession	P09936
Reactivity	Human, Rat
Host	Chicken
Clonality	polyclonal
Calculated MW	24 KDa

Ubiquitin C Terminal Hydrolase 1 (UCHL1) Antibody - Additional Information

Gene ID	7345
Gene Name	UCHL1

Other Names

Ubiquitin carboxyl-terminal hydrolase isozyme L1, UCH-L1, 6---, Neuron cytoplasmic protein 95, PGP 95, PGP95, Ubiquitin thioesterase L1, UCHL1

Target/Specificity

Recombinant full length human UCHL1 purified from E. coli.

Dilution

WB~~ 1:2500

IF~~ 1:500

Format

Total IgY fraction

Antibody Specificity

Specific for the ~24kDa UCHL1 protein.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions

Ubiquitin C Terminal Hydrolase 1 (UCHL1) Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

Shipping

Blue Ice

Ubiquitin C Terminal Hydrolase 1 (UCHL1) Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- [Western Blot](#)
- [Blocking Peptides](#)
- [Dot Blot](#)
- [Immunohistochemistry](#)
- [Immunofluorescence](#)
- [Immunoprecipitation](#)
- [Flow Cytometry](#)
- [Cell Culture](#)

Ubiquitin C Terminal Hydrolase 1 (UCHL1) Antibody - Images

Western blot of rat hippocampal homogenate showing specific immunolabeling of the ~ 24k UCHL1 protein.

Rat mixed neuron/glia cultures stained with anti-UCHL1 antibody (green) and rabbit anti-GFAP antibody (red). Blue is a DNA stain.

Ubiquitin C Terminal Hydrolase 1 (UCHL1) Antibody - Background

Ubiquitin C-terminal hydrolase 1 (UCHL1) is also known as ubiquitin carboxyl esterase L1, ubiquitin thiolesterase, neuron-specific protein PGP9.5 and Park5. It was originally identified as a major component of the neuronal cytoplasm from 2-dimensional gel analysis of brain tissues, and was given the name PGP9.5 (1). It was later found that ubiquitin C-terminal hydrolase enzyme activity was associated with the PGP9.5 protein (2). The ubiquitin C-terminal hydrolases cleave ubiquitin from other molecules. Regulation of the ubiquitin pathway is very important and many disease states are associated with defects in this pathway. Genetic knockout of UCHL1 in mice results in a

motor neuron degeneration similar to the spontaneous gracile axonal dystrophy (gad) mutant mice (3). Point mutations in the UCHL1 gene are associated with some forms of human Parkinson's disease (4). Since UCHL1 is heavily expressed in neurons, it is released in large amounts following injury or degeneration, so the detection of UCHL1 in CSF and other bodily fluids can be used as a biomarker.
