

COL4A6 Antibody (monoclonal) (M01)

Mouse monoclonal antibody raised against a full length recombinant COL4A6.

Catalog # AT1583a

Specification

COL4A6 Antibody (monoclonal) (M01) - Product Information

Application	E
Primary Accession	Q14031
Other Accession	BC005305
Reactivity	Human
Host	mouse
Clonality	Monoclonal
Isotype	IgG2a Kappa
Calculated MW	163807

COL4A6 Antibody (monoclonal) (M01) - Additional Information

Gene ID 1288

Other Names

Collagen alpha-6(IV) chain, COL4A6

Target/Specificity

COL4A6 (AAH05305, 1 a.a. ~ 73 a.a) full-length recombinant protein with GST tag. MW of the GST tag alone is 26 KDa.

Format

Clear, colorless solution in phosphate buffered saline, pH 7.2 .

Storage

Store at -20°C or lower. Aliquot to avoid repeated freezing and thawing.

Precautions

COL4A6 Antibody (monoclonal) (M01) is for research use only and not for use in diagnostic or therapeutic procedures.

COL4A6 Antibody (monoclonal) (M01) - Protocols

Provided below are standard protocols that you may find useful for product applications.

- [Western Blot](#)
- [Blocking Peptides](#)
- [Dot Blot](#)
- [Immunohistochemistry](#)
- [Immunofluorescence](#)
- [Immunoprecipitation](#)
- [Flow Cytometry](#)

- [Cell Culture](#)

COL4A6 Antibody (monoclonal) (M01) - Images

Detection limit for recombinant GST tagged COL4A6 is approximately 1ng/ml as a capture antibody.

Proximity Ligation Analysis of protein-protein interactions between OSM and COL4A6. HeLa cells were stained with anti-OSM rabbit purified polyclonal 1:1200 and anti-COL4A6 mouse monoclonal antibody 1:50. Each red dot represents the detection of protein-protein interaction complex, and nuclei were counterstained with DAPI (blue).

COL4A6 Antibody (monoclonal) (M01) - Background

This gene encodes one of the six subunits of type IV collagen, the major structural component of basement membranes. Like the other members of the type IV collagen gene family, this gene is organized in a head-to-head conformation with another type IV collagen gene, alpha 5 type IV collagen, so that the gene pair shares a common promoter. Deletions in the alpha 5 gene that extend into the alpha 6 gene result in diffuse leiomyomatosis accompanying the X-linked Alport syndrome caused by the deletion in the alpha 5 gene. Two splice variants have been identified for this gene.
