

COX6C Antibody (monoclonal) (M01)

Mouse monoclonal antibody raised against a full length recombinant COX6C. Catalog # AT1602a

Specification

COX6C Antibody (monoclonal) (M01) - Product Information

Application Primary Accession Other Accession Reactivity Host Clonality Isotype Calculated MW IF, WB, IHC <u>P09669</u> <u>BC000187</u> Human mouse Monoclonal IgG1 kappa 8781

COX6C Antibody (monoclonal) (M01) - Additional Information

Gene ID 1345

Other Names Cytochrome c oxidase subunit 6C, Cytochrome c oxidase polypeptide VIc, COX6C

Target/Specificity COX6C (AAH00187, 1 a.a. ~ 75 a.a) full-length recombinant protein with GST tag. MW of the GST tag alone is 26 KDa.

Dilution WB~~1:500~1000

Format Clear, colorless solution in phosphate buffered saline, pH 7.2 .

Storage Store at -20°C or lower. Aliquot to avoid repeated freezing and thawing.

Precautions COX6C Antibody (monoclonal) (M01) is for research use only and not for use in diagnostic or therapeutic procedures.

COX6C Antibody (monoclonal) (M01) - Protocols

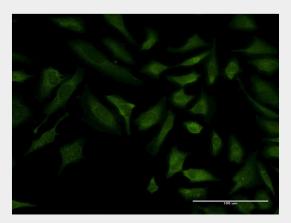

Provided below are standard protocols that you may find useful for product applications.

- <u>Western Blot</u>
- Blocking Peptides
- Dot Blot
- Immunohistochemistry

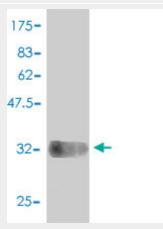

- Immunofluorescence
- Immunoprecipitation
- <u>Flow Cytomety</u>
- <u>Cell Culture</u>

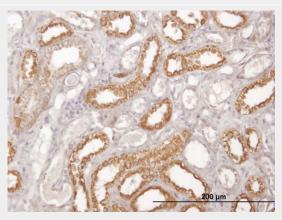

COX6C Antibody (monoclonal) (M01) - Images

Immunofluorescence of monoclonal antibody to COX6C on HeLa cell . [antibody concentration 10 $\mathsf{ug}/\mathsf{ml}]$

Antibody Reactive Against Recombinant Protein.Western Blot detection against Immunogen (33.99 KDa).

Immunoperoxidase of monoclonal antibody to COX6C on formalin-fixed paraffin-embedded human kidney. [antibody concentration 3 ug/ml]

COX6C Antibody (monoclonal) (M01) - Background

Cytochrome c oxidase, the terminal enzyme of the mitochondrial respiratory chain, catalyzes the electron transfer from reduced cytochrome c to oxygen. It is a heteromeric complex consisting of 3 catalytic subunits encoded by mitochondrial genes and multiple structural subunits encoded by nuclear genes. The mitochondrially-encoded subunits function in electron transfer, and the nuclear-encoded subunits may be involved in the regulation and assembly of the complex. This nuclear gene encodes subunit VIc, which has 77% amino acid sequence identity with mouse subunit VIc. This gene is up-regulated in prostate cancer cells. A pseudogene has been found on chromosomes 16p12.
