

TGFB1 Antibody (N-term) Blocking peptide

Synthetic peptide Catalog # BP12348a

Specification

TGFB1 Antibody (N-term) Blocking peptide - Product Information

Primary Accession

P01137

TGFB1 Antibody (N-term) Blocking peptide - Additional Information

Gene ID 7040

Other Names

Transforming growth factor beta-1, TGF-beta-1, Latency-associated peptide, LAP, TGFB1, TGFB

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

TGFB1 Antibody (N-term) Blocking peptide - Protein Information

Name TGFB1 (HGNC:11766)

Synonyms TGFB

Function

Transforming growth factor beta-1 proprotein: Precursor of the Latency-associated peptide (LAP) and Transforming growth factor beta-1 (TGF-beta-1) chains, which constitute the regulatory and active subunit of TGF-beta-1, respectively.

Cellular Location

[Latency-associated peptide]: Secreted, extracellular space, extracellular matrix

Tissue Location

Highly expressed in bone (PubMed:11746498, PubMed:17827158). Abundantly expressed in articular cartilage and chondrocytes and is increased in osteoarthritis (OA) (PubMed:11746498, PubMed:17827158). Colocalizes with ASPN in chondrocytes within OA lesions of articular cartilage (PubMed:17827158)

TGFB1 Antibody (N-term) Blocking peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

TGFB1 Antibody (N-term) Blocking peptide - Background

TGFB1 is a member of the transforming growthfactor beta (TGFB) family of cytokines, which are multifunctionalpeptides that regulate proliferation, differentiation, adhesion, migration, and other functions in many cell types. Many cells haveTGFB receptors, and the protein positively and negatively regulatesmany other growth factors. The secreted protein is cleaved into alatency-associated peptide (LAP) and a mature TGFB1 peptide, and isfound in either a latent form composed of a TGFB1 homodimer, a LAPhomodimer, and a latent TGFB1-binding protein, or in an active formcomposed of a TGFB1 homodimer. The mature peptide may also formheterodimers with other TGFB family members. This gene isfrequently upregulated in tumor cells, and mutations in this generesult in Camurati-Engelmann disease.
