

# HTR4 Antibody (N-term) Blocking peptide

Synthetic peptide Catalog # BP12604a

### **Specification**

## HTR4 Antibody (N-term) Blocking peptide - Product Information

**Primary Accession** 

013639

## HTR4 Antibody (N-term) Blocking peptide - Additional Information

**Gene ID 3360** 

#### **Other Names**

5-hydroxytryptamine receptor 4, 5-HT-4, 5-HT4, Serotonin receptor 4, HTR4

#### **Format**

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

#### Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

#### **Precautions**

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

### HTR4 Antibody (N-term) Blocking peptide - Protein Information

## Name HTR4

#### **Function**

This is one of the several different receptors for 5- hydroxytryptamine (serotonin), a biogenic hormone that functions as a neurotransmitter, a hormone, and a mitogen. The activity of this receptor is mediated by G proteins that stimulate adenylate cyclase.

#### **Cellular Location**

Cell membrane; Multi-pass membrane protein. Endosome. Note=Interaction with SNX27 mediates recruitment to early endosomes, while interaction with NHERF1 and EZR might target the protein to specialized subcellular regions, such as microvilli

#### **Tissue Location**

Isoform 5-HT4(A) is expressed in ileum, brain, and atrium, but not in the ventricle.

# HTR4 Antibody (N-term) Blocking peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

### • Blocking Peptides

## HTR4 Antibody (N-term) Blocking peptide - Images

# HTR4 Antibody (N-term) Blocking peptide - Background

This gene is a member of the family of serotoninreceptors, which are G protein coupled receptors that stimulatecAMP production in response to serotonin (5-hydroxytryptamine). Thegene product is a glycosylated transmembrane protein that functions both the peripheral and central nervous system to modulate therelease of various neurotransmitters. Multiple transcript variantsencoding proteins with distinct C-terminal sequences have beendescribed.
