

GK Antibody (N-term) Blocking peptide Synthetic peptide Catalog # BP12927a

Specification

GK Antibody (N-term) Blocking peptide - Product Information

Primary Accession

<u>P32189</u>

GK Antibody (N-term) Blocking peptide - Additional Information

Gene ID 2710

Other Names Glycerol kinase, GK, Glycerokinase, ATP:glycerol 3-phosphotransferase, GK

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions This product is for research use only. Not for use in diagnostic or therapeutic procedures.

GK Antibody (N-term) Blocking peptide - Protein Information

Name GK (<u>HGNC:4289</u>)

Function

Kinase that plays a key role in glycerol metabolism, catalyzing its phosphorylation to produce sn-glycerol 3-phosphate. Sn- glycerol 3-phosphate is a crucial intermediate in various metabolic pathways, such as the synthesis of glycerolipids and triglycerides, glycogenesis, glycolysis and gluconeogenesis.

Cellular Location

Mitochondrion outer membrane; Single-pass membrane protein. Nucleus. Cytoplasm, cytosol. Note=Glycerol kinase activity is more cytosolic in some tissues. It probably represents the expression of isoforms lacking a transmembrane domain [Isoform 4]: Cytoplasm, cytosol. Note=In adult tissues, such as liver the glycerol kinase activity is more cytosolic. It probably represents the expression of this isoform which lacks a transmembrane domain

Tissue Location

[Isoform 2]: Widely expressed in fetal and adult tissues. [Isoform 4]: The sole isoform expressed in adult liver and kidney.

GK Antibody (N-term) Blocking peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

GK Antibody (N-term) Blocking peptide - Background

The product of this gene belongs to the FGGY kinase familyof proteins and encodes glycerol kinase. Glycerol kinase is a keyenzyme in the regulation of glycerol uptake and metabolism. Itcatalyzes the phosphorylation of glycerol by ATP, yielding ADP andglycerol-3-phosphate. Defects in this gene are the cause ofglycerol kinase deficiency (GKD). Alternatively spliced transcriptvariants encoding different isoforms have been identified.
