

CLTA Antibody (Center) Blocking Peptide
Synthetic peptide
Catalog # BP9008c**Specification**

CLTA Antibody (Center) Blocking Peptide - Product InformationPrimary Accession [P09496](#)**CLTA Antibody (Center) Blocking Peptide - Additional Information****Gene ID** 1211**Other Names**

Clathrin light chain A, Lca, CLTA

Target/Specificity

The synthetic peptide sequence used to generate the antibody [AP9008c](/products/AP9008c) was selected from the Center region of human CLTA. A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

CLTA Antibody (Center) Blocking Peptide - Protein Information**Name** CLTA**Function**

Clathrin is the major protein of the polyhedral coat of coated pits and vesicles. Acts as a component of the TACC3/ch- TOG/clathrin complex proposed to contribute to stabilization of kinetochore fibers of the mitotic spindle by acting as inter- microtubule bridge (PubMed:[15858577](http://www.uniprot.org/citations/15858577)), PubMed:[21297582](http://www.uniprot.org/citations/21297582)).

Cellular Location

Cytoplasmic vesicle membrane; Peripheral membrane protein; Cytoplasmic side. Membrane, coated pit; Peripheral membrane protein; Cytoplasmic side. Cytoplasm, cytoskeleton, spindle Note=Cytoplasmic face of coated pits and vesicles. In complex with TACC3 and CKAP5 (forming the TACC3/ch-TOG/clathrin complex) localized to inter-microtubule bridges in mitotic spindles.

CLTA Antibody (Center) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.

CLTA Antibody (Center) Blocking Peptide - Background

Clathrin is a large, soluble protein composed of heavy and light chains. It functions as the main structural component of the lattice-type cytoplasmic face of coated pits and vesicles which entrap specific macromolecules during receptor-mediated endocytosis. CLTA is one of two clathrin light chain proteins which are believed to function as regulatory elements.
