

Anti-Human IFN- λ 2 Antibody
Catalog # ABG10172**Specification**

Anti-Human IFN- λ 2 Antibody - Product Information

Application	WB, IHC, E
Reactivity	Human
Host	Rabbit
Clonality	Polyclonal

Anti-Human IFN- λ 2 Antibody - Additional Information**Preparation**

Produced from sera of rabbits pre-immunized with highly pure recombinant Human IFN- λ 2. Anti-Human IFN- λ 2 specific antibody was purified by affinity chromatography employing immobilized Human IFN- λ 2 matrix.

WesternBlot

To detect Human IFN- λ 2 by Western Blot analysis this antibody can be used at a concentration of 0.1 - 0.2 μ g/ml. When used in conjunction with compatible secondary reagents, the detection limit for recombinant Human IFN- λ 2 is 1.5 - 3.0 ng/lane, under either reducing or non-reducing conditions.

Sandwich

To detect Human IFN- λ 2 by sandwich ELISA (using 100 μ l/well antibody solution) a concentration of 0.5 - 2.0 μ g/ml of this antibody is required. This antigen affinity purified antibody, in conjunction with BioGems's Biotinylated Anti-Human IFN- λ 2 (60-184BT) as a detection antibody, allows the detection of at least 0.2 - 0.4 ng/well of recombinant Human IFN- λ 2.

Immunohistochemistry

This antibody stained formalin-fixed, paraffin-embedded sections of normal human skin. The recommended concentration is 1.0 mg/ml overnight at 4°C. An alkaline phosphatase-labeled polymer detection system was used with a non-alcohol soluble red chromogen and proteinase K antigen retrieval. Optimal concentrations and conditions may vary.

Formulation

A sterile filtered antibody solution was lyophilized from PBS, pH 7.2.

Reconstitution

Centrifuge vial prior to opening. Reconstitute in sterile water to a concentration of 0.1-1.0 mg/ml.

Storage

-20°C

Precautions

Anti-Human IFN- λ 2 Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

Anti-Human IFN- λ 2 Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.
