

Anti-Human TWEAK Antibody

Catalog # ABG10569

Specification

Anti-Human TWEAK Antibody - Product Information

Application WB, E
Reactivity Human
Host Goat
Clonality Polyclonal

Anti-Human TWEAK Antibody - Additional Information

Preparation

Produced from sera of goats pre-immunized with highly pure (>98%) recombinant hTWEAK. Anti-Human TWEAK specific antibody was purified by affinity chromatography employing immobilized hTWEAK matrix.

WesternBlot

To detect hTWEAK by Western Blot analysis this antibody can be used at a concentration of 0.1-0.2 μ g/ml. Used in conjunction with compatible secondary reagents the detection limit for recombinant hTWEAK is 1.5-3.0 ng/lane, under either reducing or or non-reducing conditions.

Sandwich

To detect hTWEAK by sandwich ELISA (using 100 μ l/well antibody solution) a concentration of 0.5 - 2.0 μ g/ml of this antibody is required. This antigen affinity purified antibody, in conjunction with BioGems' Biotinylated Anti-Human TWEAK (60-335BT) as a detection antibody, allows the detection of at least 0.2 - 0.4 ng/well of recombinant hTWEAK.

Neutralization

To yield one-half maximal inhibition [ND50] of the biological activity of hTWEAK (200 ng/ml), a concentration of $0.1 - 0.2 \mu g/ml$ of this antibody is required.

Formulation

A sterile filtered antibody solution was lyophilized from PBS, pH 7.2.

Reconstitution

Centrifuge vial prior to opening. Reconstitute in sterile water to a concentration of 0.1-1.0 mg/ml.

Storage

-20°C

Precautions

Anti-Human TWEAK Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

Anti-Human TWEAK Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- <u>Immunohistochemistry</u>
- Immunofluorescence
- <u>Immunoprecipitation</u>
- Flow Cytomety
- Cell Culture
