Western blot analysis of Annexin VII expression in JURKAT whole cell lysates (lane 1). Annexin VII at 52KD was detected using rabbit anti- Annexin VII Antigen Affinity purified polyclonal antibody (Catalog # ABO10312) at 0.5 μ g/mL. The blot was developed using chemiluminescence (ECL) method .

Anti-Annexin VII Picoband Antibody - Background

ANXA7 (Annexin A7), also known as ANX7 or SNX, is a protein that in humans is encoded by the ANXA7 gene. Annexin VII is a member of the annexin family of calcium-dependent phospholipid binding proteins. This gene is mapped to 10q21.1-q21.2 by study of somatic cell hybrids and by in situ hybridization. The ANX7 gene exhibits many biologic and genetic properties expected of a tumor suppressor gene and may play a role in prostate cancer progression. Based on studies of recombinant human ANXA7 and isolated bovine chromaffin cells, it is showed that ANXA7 is a Ca(2+)-dependent GTP binding protein. ANXA7 was active in a chromaffin granule aggregation assays in the presence of Ca(2+) and GTP, and was deactivated upon GTP hydrolysis.
