

# Anti-Elastin Antibody (Monoclonal, BA-4)

Catalog # ABO10429

#### Specification

## Anti-Elastin Antibody (Monoclonal, BA-4) - Product Information

Application Primary Accession Host Isotype Reactivity Clonality Format Description

P15502 Mouse Mouse IgG1 Human Monoclonal Lyophilized

IHC-P

Mouse IgG monoclonal antibody for Elastin, elastin (ELN ) detection. Tested with IHC-P in Human; bovine. No cross reactivity with otherproteins.

Reconstitution

Add 1ml of PBS buffer will yield a concentration of 100ug/ml.

### Anti-Elastin Antibody (Monoclonal, BA-4) - Additional Information

Gene ID 2006

Other Names Elastin, Tropoelastin, ELN

Calculated MW 68469 MW KDa

Application Details Immunohistochemistry(Paraffin-embedded Section), 0.25-0.5 μg/ml, Bovine, human, By Heat<br> <br>

Subcellular Localization Secreted, extracellular space, extracellular matrix . Extracellular matrix of elastic fibers. .

Tissue Specificity

Expressed within the outer myometrial smooth muscle and throughout the arteriolar tree of uterus (at protein level). Also expressed in the large arteries, lung and skin. .

Protein Name Elastin

**Contents** Mouse ascites fluid, 1.2% sodium acetate, 2mg BSA, with 0.01mg NaN3 as preservative.

**Immunogen** Bovine alpha-elastin.

Purification Ascites

**Cross Reactivity** No cross reactivity with other proteins

Storage

At -20°C for one year. After r°Constitution, at 4°C for one month. It°Can also be aliquotted and stored frozen at -20°C for a longer time.Avoid repeated freezing and thawing.

Sequence Similarities Belongs to the elastin family.

# Anti-Elastin Antibody (Monoclonal, BA-4) - Protein Information

Name ELN

Function

Major structural protein of tissues such as aorta and nuchal ligament, which must expand rapidly and recover completely. Molecular determinant of the late arterial morphogenesis, stabilizing arterial structure by regulating proliferation and organization of vascular smooth muscle (By similarity).

**Cellular Location** Secreted, extracellular space, extracellular matrix. Note=Extracellular matrix of elastic fibers.

Tissue Location

Expressed within the outer myometrial smooth muscle and throughout the arteriolar tree of uterus (at protein level). Also expressed in the large arteries, lung and skin

## Anti-Elastin Antibody (Monoclonal, BA-4) - Protocols

Provided below are standard protocols that you may find useful for product applications.

- <u>Western Blot</u>
- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- <u>Cell Culture</u>

## Anti-Elastin Antibody (Monoclonal, BA-4) - Background

Elastin is a major structural protein of tissues such as aorta, which must expand rapidly and recover completely. Elastin chains are cross-linked together into an extensible 3D network. It is a molecular determinant of late arterial morphogenesis, stabilizing arterial structure by regulating proliferation and organization of vascular smooth muscle. Defects in elastin are a cause of autosomal dominant cutis laxa.
