## **Anti-IL-8 Antibody - Protein Information**

Name CXCL8

Synonyms IL8

### **Function**

Chemotactic factor that mediates inflammatory response by attracting neutrophils, basophils, and T-cells to clear pathogens and protect the host from infection (PubMed:<a

href="http://www.uniprot.org/citations/18692776" target=" blank">18692776</a>, PubMed:<a href="http://www.uniprot.org/citations/7636208" target=" blank">7636208</a>). Also plays an important role in neutrophil activation (PubMed: <a

href="http://www.uniprot.org/citations/2145175" target=" blank">2145175</a>, PubMed:<a href="http://www.uniprot.org/citations/9623510" target="blank">9623510</a>). Released in response to an inflammatory stimulus, exerts its effect by binding to the G-protein-coupled receptors CXCR1 and CXCR2, primarily found in neutrophils, monocytes and endothelial cells  $(PubMed:<a href="http://www.uniprot.org/citations/1840701" target="_blank">1840701</a>, PubMed:<a href="http://www.uniprot.org/citations/1891716" target="_blank">1891716</a>).$ G-protein heterotrimer (alpha, beta, gamma subunits) constitutively binds to CXCR1/CXCR2 receptor and activation by IL8 leads to beta and gamma subunits release from Galpha (GNAI2 in neutrophils) and activation of several downstream signaling pathways including PI3K and MAPK pathways (PubMed:<a href="http://www.uniprot.org/citations/11971003" target=" blank">11971003</a>, PubMed:<a href="http://www.uniprot.org/citations/8662698"

# **Anti-IL-8 Antibody - Background**

Interleukin-8(IL-8) is a chemokine produced by macrophages and other cell types such as epithelial cells. It is also synthesized by endothelial cells, which store IL-8 in their storage vesicles, the Weibel-Palade bodies. In humans, the interleukin-8 protein is encoded by the IL8 gene. Interleukin-8(IL8) is a member of the CXC chemokine family(Hull et al., 2001). IL-8 is believed to play a role in the pathogenesis of bronchiolitis, a common respiratory tract disease caused by viral infection. This gene and other ten members of the CXC chemokine gene family form a chemokine gene cluster in a region mapped to chromosome 4q. The genes for IL8 have been co-localized on a 335-kb genomic fragment.
