**Anti-P2X5 Picoband Antibody - Protein Information**

**Name** P2RX5 ([HGNC:8536](#))

**Function**

[Isoform 6]: ATP-gated nonselective transmembrane cation channel permeable to potassium, sodium and calcium (PubMed:[12761352](http://www.uniprot.org/citations/12761352)). Unlike other P2RX receptors, the P2X5 receptor is also permeable to chloride (PubMed:[12761352](http://www.uniprot.org/citations/12761352)). May play a supporting role in the inflammatory response (By similarity).

**Cellular Location**

[Isoform 6]: Cell membrane; Multi-pass membrane protein {ECO:0000250|UniProtKB:P56373}. Note=The absence of the exon 10-encoded amino acids substantially results in subunit aggregation and retention in the cell cytoplasm

**Tissue Location**

Expressed at high levels in brain and immune system

### **Anti-P2X5 Picoband Antibody - Background**

P2X purinoceptor 5 is a protein that in humans is encoded by the P2RX5 gene. The product of this gene belongs to the family of purinoceptors for ATP. It has been identified that the P2RX5 gene within a BAC contig covering chromosome 17p13. This receptor functions as a ligand-gated ion channel. Several characteristic motifs of ATP-gated channels are present in its primary structure, but, unlike other members of the purinoceptors family, this receptor has only a single

transmembrane domain. Quantitative dot blots revealed that P2X5R expression is highest in brain and immune system and is developmentally regulated.
