

**Anti-NMDAR2B Picoband Antibody**  
**Catalog # ABO12064****Specification****Anti-NMDAR2B Picoband Antibody - Product Information**

Application	WB
Primary Accession	<a href="#">Q13224</a>
Host	Rabbit
Reactivity	Human, Mouse, Rat
Clonality	Polyclonal
Format	Lyophilized

**Description**

Rabbit IgG polyclonal antibody for Glutamate receptor ionotropic, NMDA 2B(GRIN2B) detection.  
Tested with WB in Human;Mouse;Rat.

**Reconstitution**

Add 0.2ml of distilled water will yield a concentration of 500ug/ml.

**Anti-NMDAR2B Picoband Antibody - Additional Information****Gene ID 2904****Other Names**

Glutamate receptor ionotropic, NMDA 2B, GluN2B, Glutamate [NMDA] receptor subunit epsilon-2, N-methyl D-aspartate receptor subtype 2B, NMDAR2B, NR2B, N-methyl-D-aspartate receptor subunit 3, NR3, hNR3, GRIN2B, NMDAR2B

**Calculated MW**

166367 MW KDa

**Application Details**

Western blot, 0.1-0.5 µg/ml, Mouse, Rat, Human<br>

**Subcellular Localization**

Cell membrane; Multi-pass membrane protein. Cell junction, synapse, postsynaptic cell membrane; Multi-pass membrane protein.

**Tissue Specificity**

Primarily found in the fronto-parieto-temporal cortex and hippocampus pyramidal cells, lower expression in the basal ganglia. .

**Protein Name**

Glutamate receptor ionotropic, NMDA 2B

**Contents**

Each vial contains 5mg BSA, 0.9mg NaCl, 0.2mg Na<sub>2</sub>HPO<sub>4</sub>, 0.05mg NaN<sub>3</sub>.

**Immunogen**

E.coli-derived human NMDAR2B recombinant protein (Position: N1076-D1332). Human NMDAR2B

shares 97.7% and 97.3% amino acid (aa) sequence identity with mouse and rat NMDAR2B, respectively.

#### Purification

Immunogen affinity purified.

#### Cross Reactivity

No cross reactivity with other proteins.

#### Storage

At -20°C for one year. After r° Constitution, at 4°C for one month. It°Can also be aliquotted and stored frozen at -20°C for a longer time. Avoid repeated freezing and thawing.

### Anti-NMDAR2B Picoband Antibody - Protein Information

Name GRIN2B {ECO:0000303|Ref.3, ECO:0000312|HGNC:HGNC:4586}

#### Function

Component of N-methyl-D-aspartate (NMDA) receptors (NMDARs) that function as heterotetrameric, ligand-gated cation channels with high calcium permeability and voltage-dependent block by Mg(2+) (PubMed:<a href="http://www.uniprot.org/citations/24272827" target="\_blank">24272827</a>, PubMed:<a href="http://www.uniprot.org/citations/24863970" target="\_blank">24863970</a>, PubMed:<a href="http://www.uniprot.org/citations/26875626" target="\_blank">26875626</a>, PubMed:<a href="http://www.uniprot.org/citations/26919761" target="\_blank">26919761</a>, PubMed:<a href="http://www.uniprot.org/citations/27839871" target="\_blank">27839871</a>, PubMed:<a href="http://www.uniprot.org/citations/28095420" target="\_blank">28095420</a>, PubMed:<a href="http://www.uniprot.org/citations/28126851" target="\_blank">28126851</a>, PubMed:<a href="http://www.uniprot.org/citations/38538865" target="\_blank">38538865</a>, PubMed:<a href="http://www.uniprot.org/citations/8768735" target="\_blank">8768735</a>). Participates in synaptic plasticity for learning and memory formation by contributing to the long-term depression (LTD) of hippocampus membrane currents (By similarity). Channel activation requires binding of the neurotransmitter L-glutamate to the GluN2 subunit, glycine or D-serine binding to the GluN1 subunit, plus membrane depolarization to eliminate channel inhibition by Mg(2+) (PubMed:<a href="http://www.uniprot.org/citations/24272827" target="\_blank">24272827</a>, PubMed:<a href="http://www.uniprot.org/citations/24863970" target="\_blank">24863970</a>, PubMed:<a href="http://www.uniprot.org/citations/26875626" target="\_blank">26875626</a>, PubMed:<a href="http://www.uniprot.org/citations/26919761" target="\_blank">26919761</a>, PubMed:<a href="http://www.uniprot.org/citations/27839871" target="\_blank">27839871</a>, PubMed:<a href="http://www.uniprot.org/citations/28095420" target="\_blank">28095420</a>, PubMed:<a href="http://www.uniprot.org/citations/28126851" target="\_blank">28126851</a>, PubMed:<a href="http://www.uniprot.org/citations/38538865" target="\_blank">38538865</a>, PubMed:<a href="http://www.uniprot.org/citations/8768735" target="\_blank">8768735</a>). NMDARs mediate simultaneously the potassium efflux and the influx of calcium and sodium (By similarity). Each GluN2 subunit confers differential attributes to channel properties, including activation, deactivation and desensitization kinetics, pH sensitivity, Ca2(+) permeability, and binding to allosteric modulators (PubMed:<a href="http://www.uniprot.org/citations/26875626" target="\_blank">26875626</a>, PubMed:<a href="http://www.uniprot.org/citations/28095420" target="\_blank">28095420</a>, PubMed:<a href="http://www.uniprot.org/citations/28126851" target="\_blank">28126851</a>, PubMed:<a href="http://www.uniprot.org/citations/38538865" target="\_blank">38538865</a>, PubMed:<a href="http://www.uniprot.org/citations/8768735" target="\_blank">8768735</a>). In concert with DAPK1 at extrasynaptic sites, acts as a central mediator for stroke damage. Its phosphorylation at Ser-1303 by DAPK1 enhances synaptic NMDA receptor channel activity inducing injurious Ca2+ influx through them, resulting in an irreversible

neuronal death (By similarity).

#### Cellular Location

Cell membrane; Multi-pass membrane protein. Postsynaptic cell membrane {ECO:0000250|UniProtKB:Q00960}; Multi-pass membrane protein. Cell projection, dendrite. Late endosome {ECO:0000250|UniProtKB:Q01097}. Lysosome {ECO:0000250|UniProtKB:Q01097}. Cytoplasm, cytoskeleton {ECO:0000250|UniProtKB:Q01097}. Note=Co-localizes with the motor protein KIF17 along microtubules. {ECO:0000250|UniProtKB:Q01097}

#### Tissue Location

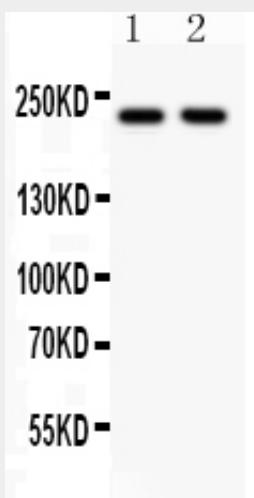

Primarily found in the fronto-parieto-temporal cortex and hippocampus pyramidal cells, lower expression in the basal ganglia.

### Anti-NMDAR2B Picoband Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

### Anti-NMDAR2B Picoband Antibody - Background

The N-methyl-D-aspartate receptor 2B (NMDAR2B), also names as GRIN2B. The sequence of the predicted 1,484-amino acid human protein is 98% and 96% identical to the sequences of the rat and mouse Nmdar2b proteins, respectively. Nmdar2B gene is located on mouse chromosome 6 between Rho and Ly49 centromerically and Glb telomerically. Mapping of the human NMDAR2B

receptor subunit gene (GRIN2B) to chromosome 12p12 overexpression of NMDA receptor 2B (NR2B) in the forebrains of transgenic mice leads to enhanced activation of NMDA receptors, facilitating synaptic potentiation in response to stimulation at 10-100 Hz.
