

**Anti-RIP RIPK1 Rabbit Monoclonal Antibody**  
**Catalog # ABO13265****Specification**

---

**Anti-RIP RIPK1 Rabbit Monoclonal Antibody - Product Information**

Application	WB, FC
Primary Accession	<a href="#">Q13546</a>
Host	Rabbit
Isotype	Rabbit IgG
Reactivity	Human
Clonality	Monoclonal
Format	Liquid

**Description**

Anti-RIP RIPK1 Rabbit Monoclonal Antibody . Tested in WB, Flow Cytometry applications. This antibody reacts with Human.

**Anti-RIP RIPK1 Rabbit Monoclonal Antibody - Additional Information**

**Gene ID** 8737

**Other Names**

Receptor-interacting serine/threonine-protein kinase 1, 2.7.11.1, Cell death protein RIP, Receptor-interacting protein 1, RIP-1, RIPK1 ([http://www.genenames.org/cgi-bin/gene\\_symbol\\_report?hgnc\\_id=10019](http://www.genenames.org/cgi-bin/gene_symbol_report?hgnc_id=10019))  
HGNC:10019

**Calculated MW**

75931 MW KDa

**Application Details**

WB 1:500-1:2000  
FC 1:20

**Subcellular Localization**

Cytoplasm. Cell membrane.

**Contents**

Rabbit IgG in phosphate buffered saline, pH 7.4, 150mM NaCl, 0.02% sodium azide and 50% glycerol, 0.4-0.5mg/ml BSA.

**Immunogen**

A synthesized peptide derived from human RIP

**Purification**

Affinity-chromatography

**Storage**

**Store at -20°C for one year. For short term storage and frequent use, store at 4°C for up to one month. Avoid repeated freeze-thaw cycles.**

## Anti-RIP RIPK1 Rabbit Monoclonal Antibody - Protein Information

**Name** RIPK1 ([HGNC:10019](#))

### Function

Serine-threonine kinase which is a key regulator of TNF- mediated apoptosis, necroptosis and inflammatory pathways (PubMed:<a href="http://www.uniprot.org/citations/17703191" target="\_blank">17703191</a>, PubMed:<a href="http://www.uniprot.org/citations/24144979" target="\_blank">24144979</a>, PubMed:<a href="http://www.uniprot.org/citations/31827280" target="\_blank">31827280</a>, PubMed:<a href="http://www.uniprot.org/citations/31827281" target="\_blank">31827281</a>, PubMed:<a href="http://www.uniprot.org/citations/32657447" target="\_blank">32657447</a>, PubMed:<a href="http://www.uniprot.org/citations/35831301" target="\_blank">35831301</a>). Exhibits kinase activity-dependent functions that regulate cell death and kinase-independent scaffold functions regulating inflammatory signaling and cell survival (PubMed:<a href="http://www.uniprot.org/citations/11101870" target="\_blank">11101870</a>, PubMed:<a href="http://www.uniprot.org/citations/19524512" target="\_blank">19524512</a>, PubMed:<a href="http://www.uniprot.org/citations/19524513" target="\_blank">19524513</a>, PubMed:<a href="http://www.uniprot.org/citations/29440439" target="\_blank">29440439</a>, PubMed:<a href="http://www.uniprot.org/citations/30988283" target="\_blank">30988283</a>). Has kinase-independent scaffold functions: upon binding of TNF to TNFR1, RIPK1 is recruited to the TNF-R1 signaling complex (TNF-RSC also known as complex I) where it acts as a scaffold protein promoting cell survival, in part, by activating the canonical NF-kappa-B pathway (By similarity). Kinase activity is essential to regulate necroptosis and apoptosis, two parallel forms of cell death: upon activation of its protein kinase activity, regulates assembly of two death-inducing complexes, namely complex IIa (RIPK1-FADD-CASP8), which drives apoptosis, and the complex IIb (RIPK1-RIPK3-MLKL), which drives necroptosis (By similarity). RIPK1 is required to limit CASP8- dependent TNFR1-induced apoptosis (By similarity). In normal conditions, RIPK1 acts as an inhibitor of RIPK3-dependent necroptosis, a process mediated by RIPK3 component of complex IIb, which catalyzes phosphorylation of MLKL upon induction by ZBP1 (PubMed:<a href="http://www.uniprot.org/citations/19524512" target="\_blank">19524512</a>, PubMed:<a href="http://www.uniprot.org/citations/19524513" target="\_blank">19524513</a>, PubMed:<a href="http://www.uniprot.org/citations/29440439" target="\_blank">29440439</a>, PubMed:<a href="http://www.uniprot.org/citations/30988283" target="\_blank">30988283</a>). Inhibits RIPK3- mediated necroptosis via FADD-mediated recruitment of CASP8, which cleaves RIPK1 and limits TNF-induced necroptosis (PubMed:<a href="http://www.uniprot.org/citations/19524512" target="\_blank">19524512</a>, PubMed:<a href="http://www.uniprot.org/citations/19524513" target="\_blank">19524513</a>, PubMed:<a href="http://www.uniprot.org/citations/29440439" target="\_blank">29440439</a>, PubMed:<a href="http://www.uniprot.org/citations/30988283" target="\_blank">30988283</a>). Required to inhibit apoptosis and necroptosis during embryonic development: acts by preventing the interaction of TRADD with FADD thereby limiting aberrant activation of CASP8 (By similarity). In addition to apoptosis and necroptosis, also involved in inflammatory response by promoting transcriptional production of pro-inflammatory cytokines, such as interleukin-6 (IL6) (PubMed:<a href="http://www.uniprot.org/citations/31827280" target="\_blank">31827280</a>, PubMed:<a href="http://www.uniprot.org/citations/31827281" target="\_blank">31827281</a>). Phosphorylates RIPK3: RIPK1 and RIPK3 undergo reciprocal auto- and trans- phosphorylation (PubMed:<a href="http://www.uniprot.org/citations/19524513" target="\_blank">19524513</a>). Phosphorylates DAB2IP at 'Ser-728' in a TNF-alpha-dependent manner, and thereby activates the MAP3K5-JNK apoptotic cascade (PubMed:<a href="http://www.uniprot.org/citations/15310755" target="\_blank">15310755</a>, PubMed:<a href="http://www.uniprot.org/citations/17389591" target="\_blank">17389591</a>). Required for ZBP1-induced NF-kappa-B activation in response to DNA damage (By similarity).

### Cellular Location

Cytoplasm {ECO:0000250|UniProtKB:Q60855}. Cell membrane

- [Dot Blot](#)
- [Immunohistochemistry](#)
- [Immunofluorescence](#)
- [Immunoprecipitation](#)
- [Flow Cytometry](#)
- [Cell Culture](#)

### Anti-RIP RIPK1 Rabbit Monoclonal Antibody - Images

Figure 1. Western blot analysis of RIPK1 using anti-RIPK1 antibody (M00141).

Electrophoresis was performed on a 5-20% SDS-PAGE gel at 70V (Stacking gel) / 90V (Resolving gel) for 2-3 hours. The sample well of each lane was loaded with 30 ug of sample under reducing conditions.

Lane 1: human HeLa whole cell lysates,

Lane 2: human K562 whole cell lysates,

Lane 3: human Raji whole cell lysates,

Lane 4: human Jurkat whole cell lysates.

After electrophoresis, proteins were transferred to a nitrocellulose membrane at 150 mA for 50-90 minutes. Blocked the membrane with 5% non-fat milk/TBS for 1.5 hour at RT. The membrane was incubated with rabbit anti-RIPK1 antigen affinity purified monoclonal antibody (Catalog # M00141) at 1:500 overnight at 4°C, then washed with TBS-0.1%Tween 3 times with 5 minutes each and probed with a goat anti-rabbit IgG-HRP secondary antibody at a dilution of 1:5000 for 1.5 hour at RT. The signal is developed using an Enhanced Chemiluminescent detection (ECL) kit (Catalog # EK1002) with Tanon 5200 system. A specific band was detected for RIPK1 at approximately 76 kDa. The expected band size for RIPK1 is at 76 kDa.
