

Anti-Aurora B AURKB Rabbit Monoclonal Antibody
Catalog # ABO13909**Specification****Anti-Aurora B AURKB Rabbit Monoclonal Antibody - Product Information**

Application	WB, IHC, IF, ICC, IP
Primary Accession	Q96GD4
Host	Rabbit
Isotype	Rabbit IgG
Reactivity	Human
Clonality	Monoclonal
Format	Liquid

Description

Anti-Aurora B AURKB Rabbit Monoclonal Antibody . Tested in WB, IHC, ICC/IF, IP applications. This antibody reacts with Human.

Anti-Aurora B AURKB Rabbit Monoclonal Antibody - Additional Information

Gene ID 9212

Other Names

Aurora kinase B, 2.7.11.1, Aurora 1, Aurora- and IPL1-like midbody-associated protein 1, AIM-1, Aurora/IPL1-related kinase 2, ARK-2, Aurora-related kinase 2, STK-1, Serine/threonine-protein kinase 12, Serine/threonine-protein kinase 5, Serine/threonine-protein kinase aurora-B, AURKB

Calculated MW

39311 MW KDa

Application Details

WB 1:1000-1:2000
IHC 1:50-1:200
ICC/IF 1:50-1:200
IP 1:50

Subcellular Localization

Nucleus. Chromosome. Chromosome, centromere. Cytoplasm, cytoskeleton, spindle. Midbody. Localizes on chromosome arms and inner centromeres from prophase through metaphase and then transferring to the spindle midzone and midbody from anaphase through cytokinesis. Colocalized with gamma tubulin in the mid-body. Proper localization of the active, Thr-232-phosphorylated form during metaphase may be dependent upon interaction with SPDYC. Colocalized with SIRT2 during cytokinesis with the midbody.

Tissue Specificity

High level expression seen in the thymus. It is also expressed in the spleen, lung, testis, colon, placenta and fetal liver. Expressed during S and G2/M phase and expression is up-regulated in cancer cells during M phase..

Contents

Rabbit IgG in phosphate buffered saline, pH 7.4, 150mM NaCl, 0.02% sodium azide and 50% glycerol, 0.4-0.5mg/ml BSA.

Immunogen

A synthesized peptide derived from human Aurora B

Purification

Affinity-chromatography

Storage

Store at -20°C for one year. For short term storage and frequent use, store at 4°C for up to one month. Avoid repeated freeze-thaw cycles.

Anti-Aurora B AURKB Rabbit Monoclonal Antibody - Protein Information

Name AURKB

Function

Serine/threonine-protein kinase component of the chromosomal passenger complex (CPC), a complex that acts as a key regulator of mitosis (PubMed: [11516652](http://www.uniprot.org/citations/11516652), PubMed: [12925766](http://www.uniprot.org/citations/12925766), PubMed: [14610074](http://www.uniprot.org/citations/14610074), PubMed: [14722118](http://www.uniprot.org/citations/14722118), PubMed: [29449677](http://www.uniprot.org/citations/29449677)). The CPC complex has essential functions at the centromere in ensuring correct chromosome alignment and segregation and is required for chromatin-induced microtubule stabilization and spindle assembly (PubMed: [11516652](http://www.uniprot.org/citations/11516652), PubMed: [12925766](http://www.uniprot.org/citations/12925766), PubMed: [14610074](http://www.uniprot.org/citations/14610074), PubMed: [14722118](http://www.uniprot.org/citations/14722118), PubMed: [26829474](http://www.uniprot.org/citations/26829474)). Involved in the bipolar attachment of spindle microtubules to kinetochores and is a key regulator for the onset of cytokinesis during mitosis (PubMed: [15249581](http://www.uniprot.org/citations/15249581)). Required for central/midzone spindle assembly and cleavage furrow formation (PubMed: [12458200](http://www.uniprot.org/citations/12458200), PubMed: [12686604](http://www.uniprot.org/citations/12686604)). Key component of the cytokinesis checkpoint, a process required to delay abscission to prevent both premature resolution of intercellular chromosome bridges and accumulation of DNA damage: phosphorylates CHMP4C, leading to retain abscission-competent VPS4 (VPS4A and/or VPS4B) at the midbody ring until abscission checkpoint signaling is terminated at late cytokinesis (PubMed: [22422861](http://www.uniprot.org/citations/22422861), PubMed: [24814515](http://www.uniprot.org/citations/24814515)). AURKB phosphorylates the CPC complex subunits BIRC5/survivin, CDCA8/borealin and INCENP (PubMed: [11516652](http://www.uniprot.org/citations/11516652), PubMed: [12925766](http://www.uniprot.org/citations/12925766), PubMed: [14610074](http://www.uniprot.org/citations/14610074)). Phosphorylation of INCENP leads to increased AURKB activity (PubMed: [11516652](http://www.uniprot.org/citations/11516652), PubMed: [12925766](http://www.uniprot.org/citations/12925766), PubMed: [14610074](http://www.uniprot.org/citations/14610074)). Other known AURKB substrates involved in centromeric functions and mitosis are CENPA, DES/desmin, GPAF, KIF2C, NSUN2, RACGAP1, SEPTIN1, VIM/vimentin, HASPIN, and histone H3 (PubMed: [11756469](http://www.uniprot.org/citations/11756469), PubMed: [11784863](http://www.uniprot.org/citations/11784863), PubMed: [11856369](http://www.uniprot.org/citations/11856369), PubMed: [12689593](http://www.uniprot.org/citations/12689593), PubMed: [14602875](http://www.uniprot.org/citations/14602875), PubMed: [14602875](http://www.uniprot.org/citations/14602875)).

[16103226](http://www.uniprot.org/citations/16103226), PubMed: [21658950](http://www.uniprot.org/citations/21658950)). A positive feedback loop involving HASPIN and AURKB contributes to localization of CPC to centromeres (PubMed: [21658950](http://www.uniprot.org/citations/21658950)). Phosphorylation of VIM controls vimentin filament segregation in cytokinetic process, whereas histone H3 is phosphorylated at 'Ser-10' and 'Ser-28' during mitosis (H3S10ph and H3S28ph, respectively) (PubMed: [11784863](http://www.uniprot.org/citations/11784863), PubMed: [11856369](http://www.uniprot.org/citations/11856369), PubMed: [15020684](http://www.uniprot.org/citations/15020684)). AURKB is also required for kinetochore localization of BUB1 and SGO1 (PubMed: [15020684](http://www.uniprot.org/citations/15020684), PubMed: [17617734](http://www.uniprot.org/citations/17617734), PubMed: [20959462](http://www.uniprot.org/citations/20959462)). Phosphorylation of p53/TP53 negatively regulates its transcriptional activity (PubMed: [20959462](http://www.uniprot.org/citations/20959462)). Key regulator of active promoters in resting B- and T-lymphocytes: acts by mediating phosphorylation of H3S28ph at active promoters in resting B-cells, inhibiting RNF2/RING1B-mediated ubiquitination of histone H2A and enhancing binding and activity of the USP16 deubiquitinase at transcribed genes (By similarity). Acts as an inhibitor of CGAS during mitosis: catalyzes phosphorylation of the N-terminus of CGAS during the G2-M transition, blocking CGAS liquid phase separation and activation, and thereby preventing CGAS-induced autoimmunity (PubMed: [33542149](http://www.uniprot.org/citations/33542149)). Phosphorylates KRT5 during anaphase and telophase (By similarity). Phosphorylates ATXN10 which promotes phosphorylation of ATXN10 by PLK1 and may play a role in the regulation of cytokinesis and stimulating the proteasomal degradation of ATXN10 (PubMed: [25666058](http://www.uniprot.org/citations/25666058)).

Cellular Location

Nucleus. Chromosome. Chromosome, centromere. Chromosome, centromere, kinetochore. Cytoplasm, cytoskeleton, spindle. Midbody. Note=Localizes on chromosome arms and inner centromeres from prophase through metaphase and then transferring to the spindle midzone and midbody from anaphase through cytokinesis (PubMed:20929775). Colocalized with gamma tubulin in the midbody (PubMed:17726514). Proper localization of the active, Thr-232- phosphorylated form during metaphase may be dependent upon interaction with SPDYC (PubMed:20605920). Colocalized with SIRT2 during cytokinesis with the midbody (PubMed:17726514). Localization (and probably targeting of the CPC) to the inner centromere occurs predominantly in regions with overlapping mitosis-specific histone phosphorylations H3pT3 and H2ApT12 (PubMed:20929775).

Tissue Location

High level expression seen in the thymus. It is also expressed in the spleen, lung, testis, colon, placenta and fetal liver. Expressed during S and G2/M phase and expression is up-regulated in cancer cells during M phase.

Anti-Aurora B AURKB Rabbit Monoclonal Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

Anti-Aurora B AURKB Rabbit Monoclonal Antibody - Images

Figure 1. Western blot analysis of Aurora B using anti-Aurora B antibody (M00762-1). Electrophoresis was performed on a 5-20% SDS-PAGE gel at 70V (Stacking gel) / 90V (Resolving gel) for 2-3 hours. The sample well of each lane was loaded with 30 ug of sample under reducing conditions.

Lane 1: human HeLa whole cell lysates,
Lane 2: human 293T whole cell lysates,
Lane 3: human Jurkat whole cell lysates,
Lane 4: human U251 whole cell lysates.

After electrophoresis, proteins were transferred to a nitrocellulose membrane at 150 mA for 50-90 minutes. Blocked the membrane with 5% non-fat milk/TBS for 1.5 hour at RT. The membrane was incubated with rabbit anti-Aurora B antigen affinity purified monoclonal antibody (Catalog # M00762-1) at 1:1000 overnight at 4°C, then washed with TBS-0.1%Tween 3 times with 5 minutes each and probed with a goat anti-rabbit IgG-HRP secondary antibody at a dilution of 1:500 for 1.5 hour at RT. The signal is developed using an Enhanced Chemiluminescent detection (ECL) kit (Catalog # EK1002) with Tanon 5200 system. A specific band was detected for Aurora B at approximately 39 kDa. The expected band size for Aurora B is at 39 kDa.

Figure 2. IHC analysis of AURKB using anti-AURKB antibody (M00762-1). AURKB was detected in a paraffin-embedded section of human bladder urothelial carcinoma tissue. Heat mediated antigen retrieval was performed in EDTA buffer (pH 8.0, epitope retrieval solution). The tissue section was blocked with 10% goat serum. The tissue section was then incubated with 1:50 rabbit anti-AURKB Antibody (M00762-1) overnight at 4°C. Peroxidase

Conjugated Goat Anti-rabbit IgG was used as secondary antibody and incubated for 30 minutes at 37°C. The tissue section was developed using HRP Conjugated Rabbit IgG Super Vision Assay Kit (Catalog # SV0002) with DAB as the chromogen.

Figure 3. IHC analysis of AURKB using anti-AURKB antibody (M00762-1). AURKB was detected in a paraffin-embedded section of human tonsil tissue. Heat mediated antigen retrieval was performed in EDTA buffer (pH 8.0, epitope retrieval solution). The tissue section was blocked with 10% goat serum. The tissue section was then incubated with 1:50 rabbit anti-AURKB Antibody (M00762-1) overnight at 4°C. Peroxidase Conjugated Goat Anti-rabbit IgG was used as secondary antibody and incubated for 30 minutes at 37°C. The tissue section was developed using HRP Conjugated Rabbit IgG Super Vision Assay Kit (Catalog # SV0002) with DAB as the chromogen.
