**Anti-Glycogen synthase GYS1 Rabbit Monoclonal Antibody - Protein Information**

**Name** GYS1 ([HGNC:4706](#))

**Synonyms** GYS

**Function**

Glycogen synthase participates in the glycogen biosynthetic process along with glycogenin and glycogen branching enzyme. Extends the primer composed of a few glucose units formed by glycogenin by adding new glucose units to it. In this context, glycogen synthase transfers the glycosyl residue from UDP-Glc to the non-reducing end of alpha-1,4-glucan.

**Tissue Location**

Expressed in skeletal muscle and most other cell types where glycogen is present.
