

Anti-APE1 Rabbit Monoclonal Antibody

Catalog # ABO15168

Specification

Anti-APE1 Rabbit Monoclonal Antibody - Product Information

Application WB, IHC
Primary Accession P27695
Host Rabbit
Isotype IgG

Reactivity Rat, Human, Mouse

Clonality Monoclonal Format Liquid

Description

Anti-APE1 Rabbit Monoclonal Antibody . Tested in WB, IHC applications. This antibody reacts with Human, Mouse, Rat.

Anti-APE1 Rabbit Monoclonal Antibody - Additional Information

Gene ID 328

Other Names

DNA repair nuclease/redox regulator APEX1, 3.1.11.2, 3.1.21.-, APEX nuclease, APEN, Apurinic-apyrimidinic endonuclease 1, AP endonuclease 1, APE-1, DNA-(apurinic or apyrimidinic site) endonuclease, Redox factor-1, REF-1, DNA repair nuclease/redox regulator APEX1, mitochondrial, APEX1, APE, APE1, APEX, APX, HAP1, REF1

Application Details

WB 1:1000-1:5000
IHC 1:50-1:200

Contents

Rabbit IgG in phosphate buffered saline, pH 7.4, 150mM NaCl, 0.02% sodium azide and 50% glycerol, 0.4-0.5mg/ml BSA.

Immunogen

A synthesized peptide derived from human APE1

Purification

Affinity-chromatography

Storage Store at -20°C for one year. For short term

storage and frequent use, store at 4°C for

up to one month. Avoid repeated

freeze-thaw cycles.

Anti-APE1 Rabbit Monoclonal Antibody - Protein Information

Name APEX1

Synonyms APE, APE1, APEX, APX, HAP1, REF1

Function

```
Multifunctional protein that plays a central role in the cellular response to oxidative stress. The two
major activities of APEX1 are DNA repair and redox regulation of transcriptional factors
(PubMed:<a href="http://www.uniprot.org/citations/11118054" target=" blank">11118054</a>,

PubMed:<a href="http://www.uniprot.org/citations/9560228" target="_blank">9560228</a>).
Functions as an apurinic/apyrimidinic (AP) endodeoxyribonuclease in the base excision repair
(BER) pathway of DNA lesions induced by oxidative and alkylating agents. Initiates repair of AP
sites in DNA by catalyzing hydrolytic incision of the phosphodiester backbone immediately
adjacent to the damage, generating a single-strand break with 5'-deoxyribose phosphate and
3'-hydroxyl ends. Also incises at AP sites in the DNA strand of DNA/RNA hybrids, single-stranded
DNA regions of R-loop structures, and single-stranded RNA molecules (PubMed: <a
href="http://www.uniprot.org/citations/15380100" target=" blank">15380100</a>, PubMed:<a
href="http://www.uniprot.org/citations/16617147" target="blank">16617147</a>, PubMed:<a

href="http://www.uniprot.org/citations/19188445" target="blank">19188445</a>, PubMed:<a
href="http://www.uniprot.org/citations/19934257" target="blank">19934257</a>, PubMed:<a
href="http://www.uniprot.org/citations/20699270" target="blank">20699270</a>, PubMed:<a
href="http://www.uniprot.org/citations/21762700" target="blank">21762700</a>, PubMed:<a
href="http://www.uniprot.org/citations/24079850" target="blank">24079850</a>, PubMed:<a
href="http://www.uniprot.org/citations/8932375" target=" blank">8932375</a>, PubMed:<a
href="http://www.uniprot.org/citations/8995436" target="blank">8995436</a>, PubMed:<a
href="http://www.uniprot.org/citations/9804799" target="blank">9804799</a>). Operates at
switch sites of immunoglobulin (Ig) constant regions where it mediates Ig isotype class switch
recombination. Processes AP sites induced by successive action of AICDA and UNG. Generates
staggered nicks in opposite DNA strands resulting in the formation of double-strand DNA breaks
that are finally resolved via non-homologous end joining repair pathway (By similarity). Has 3'-5'
exodeoxyribonuclease activity on mismatched deoxyribonucleotides at the 3' termini of nicked or
gapped DNA molecules during short-patch BER (PubMed:<a
href="http://www.uniprot.org/citations/11832948" target="_blank">11832948</a>, PubMed:<a
href="http://www.uniprot.org/citations/1719477" target=" blank">1719477</a>). Possesses DNA
3' phosphodiesterase activity capable of removing lesions (such as phosphoglycolate and 8-
oxoguanine) blocking the 3' side of DNA strand breaks (PubMed: <a
href="http://www.uniprot.org/citations/15831793" target=" blank">15831793</a>, PubMed:<a
href="http://www.uniprot.org/citations/7516064" target="_blank">7516064</a>). Also acts as an
endoribonuclease involved in the control of single-stranded RNA metabolism. Plays a role in
regulating MYC mRNA turnover by preferentially cleaving in between UA and CA dinucleotides of
the MYC coding region determinant (CRD). In association with NMD1, plays a role in the rRNA
quality control process during cell cycle progression (PubMed: <a
href="http://www.uniprot.org/citations/19188445" target=" blank">19188445</a>, PubMed:<a
href="http://www.uniprot.org/citations/19401441" target="_blank">19401441</a>, PubMed:<a
href="http://www.uniprot.org/citations/21762700" target="blank">21762700</a>). Acts as a
loading factor for POLB onto non-incised AP sites in DNA and stimulates the 5'-terminal
deoxyribose 5'-phosphate (dRp) excision activity of POLB (PubMed: <a
href="http://www.uniprot.org/citations/9207062" target=" blank">9207062</a>). Exerts
reversible nuclear redox activity to regulate DNA binding affinity and transcriptional activity of
transcriptional factors by controlling the redox status of their DNA-binding domain, such as the
```

FOS/JUN AP-1 complex after exposure to IR (PubMed:10023679, PubMed:11118054, PubMed:11452037, PubMed:11452037, PubMed:11452037, PubMed:18579163, PubMed:8355688, PubMed:9108029). Involved in calcium-dependent down-regulation of parathyroid hormone (PTH) expression by binding to negative calcium response elements (nCaREs). Together with HNRNPL or the dimer XRCC5/XRCC6, associates with nCaRE, acting as an activator of transcriptional repression (PubMed:11809897, PubMed:14633989, PubMed:8621488). May also play a role in the epigenetic regulation of gene expression by participating in DNA demethylation (PubMed:21496894). Stimulates the YBX1-mediated MDR1 promoter activity, when acetylated at Lys-6 and Lys-7, leading to drug resistance (PubMed: 18809583). Plays a role in protection from granzyme-mediated cellular repair leading to cell death (PubMed: 18179823). Binds DNA and RNA. Associates, together with YBX1, on the MDR1 promoter. Together with NPM1, associates with rRNA (PubMed: <a

 $href="http://www.uniprot.org/citations/19188445" target="_blank">19188445, PubMed:19401441, PubMed:20699270).$

Cellular Location

Nucleus {ECO:0000255|PROSITE-ProRule:PRU00764}. Nucleus, nucleolus. Nucleus speckle. Endoplasmic reticulum. Cytoplasm Note=Detected in the cytoplasm of B-cells stimulated to switch (By similarity). Colocalized with SIRT1 in the nucleus. Colocalized with YBX1 in nuclear speckles after genotoxic stress. Together with OGG1 is recruited to nuclear speckles in UVA-irradiated cells. Colocalized with nucleolin and NPM1 in the nucleolus. Its nucleolar localization is cell cycle dependent and requires active rRNA transcription. Colocalized with calreticulin in the endoplasmic reticulum. Translocation from the nucleus to the cytoplasm is stimulated in presence of nitric oxide (NO) and function in a CRM1-dependent manner, possibly as a consequence of demasking a nuclear export signal (amino acid position 64-80). S- nitrosylation at Cys-93 and Cys-310 regulates its nuclear-cytosolic shuttling. Ubiquitinated form is localized predominantly in the cytoplasm.

Anti-APE1 Rabbit Monoclonal Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- Cell Culture
