### **RIP3 Antibody - Additional Information**

**Gene ID** 56532

Application & Usage

Western blotting (0.5-4  $\mu$ g/ml) and in Immunohistochemistry (10-20  $\mu$ g/ml). Rat kidney tissue section can be used as a positive control. An approximately 57 kDa band should be detected.

#### **Other Names**

RIP like protein kinase 3, RIPK3, RIPK3

**Target/Specificity** 

RIP3

**Antibody Form** 

Liquid

**Appearance** 

Colorless liquid

## **Formulation**

 $100 \mu g$  (0.5 mg/ml) immunoaffinity purified rabbit anti-RIP3 polyclonal antibody in phosphate buffered saline (PBS), pH 7.2, containing 30% glycerol, 0.5% BSA, 0.01% thimerosal.

#### Handling

The antibody solution should be gently mixed before use.

**Reconstitution & Storage** 

-20 °C

**Background Descriptions** 

**Precautions** 

RIP3 Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

# **RIP3 Antibody - Protein Information**

Name Ripk3 {ECO:0000303|PubMed:27321907, ECO:0000312|MGI:MGI:2154952}

#### **Function**

```
Serine/threonine-protein kinase that activates necroptosis and apoptosis, two parallel forms of cell
death (PubMed: <a href="http://www.uniprot.org/citations/27321907"
target=" blank">27321907</a>, PubMed:<a href="http://www.uniprot.org/citations/27746097"
target="blank">27746097</a>, PubMed:<a href="http://www.uniprot.org/citations/27917412"
target="blank">27917412</a>, PubMed:<a href="http://www.uniprot.org/citations/28607035"
target="blank">28607035</a>, PubMed:<a href="http://www.uniprot.org/citations/32200799"
target="_blank">32200799</a>, PubMed:<a href="http://www.uniprot.org/citations/32296175"
target=" blank">32296175</a>). Necroptosis, a programmed cell death process in response to
death-inducing TNF-alpha family members, is triggered by RIPK3 following activation by ZBP1
(PubMed:<a href="http://www.uniprot.org/citations/19590578" target=" blank">19590578</a>,
PubMed: <a href="http://www.uniprot.org/citations/22423968" target="blank">22423968</a>,
PubMed: <a href="http://www.uniprot.org/citations/24012422" target="blank">24012422</a>,
PubMed:<a href="http://www.uniprot.org/citations/24019532" target="_blank">24019532</a>, PubMed:<a href="http://www.uniprot.org/citations/24557836" target="_blank">24557836</a>, PubMed:<a href="http://www.uniprot.org/citations/24557836" target="_blank">24557836</a>,
PubMed:<a href="http://www.uniprot.org/citations/27746097" target="blank">27746097</a>,
PubMed:<a href="http://www.uniprot.org/citations/27819681" target="blank">27819681</a>,
PubMed:<a href="http://www.uniprot.org/citations/27819682" target="blank">27819682</a>,
PubMed:<a href="http://www.uniprot.org/citations/24095729" target="blank">24095729</a>,
PubMed:<a href="http://www.uniprot.org/citations/32200799" target="_blank">32200799</a>,
PubMed: <a href="http://www.uniprot.org/citations/27321907" target="blank">27321907</a>,
PubMed:<a href="http://www.uniprot.org/citations/32296175" target=" blank">32296175</a>).
Activated RIPK3 forms a necrosis- inducing complex and mediates phosphorylation of MLKL,
promoting MLKL localization to the plasma membrane and execution of programmed necrosis
characterized by calcium influx and plasma membrane damage (PubMed:<a
href="http://www.uniprot.org/citations/24813849" target=" blank">24813849</a>, PubMed:<a
href="http://www.uniprot.org/citations/24813850" target="blank">24813850</a>, PubMed:<a
href="http://www.uniprot.org/citations/27321907" target="_blank">27321907</a>). In addition to
TNF-induced necroptosis, necroptosis can also take place in the nucleus in response to
orthomyxoviruses infection: following ZBP1 activation, which senses double-stranded Z-RNA
structures, nuclear RIPK3 catalyzes phosphorylation and activation of MLKL, promoting disruption
of the nuclear envelope and leakage of cellular DNA into the cytosol (PubMed: <a
href="http://www.uniprot.org/citations/32200799" target=" blank">32200799</a>, PubMed:<a
href="http://www.uniprot.org/citations/32296175" target="blank">32296175</a>). Also
regulates apoptosis: apoptosis depends on RIPK1, FADD and CASP8, and is independent of MLKL
and RIPK3 kinase activity (PubMed: <a href="http://www.uniprot.org/citations/27321907"
target=" blank">27321907</a>). Phosphorylates RIPK1: RIPK1 and RIPK3 undergo reciprocal
auto- and trans-phosphorylation (By similarity). In some cell types, also able to restrict viral
replication by promoting cell death-independent responses (PubMed:<a
href="http://www.uniprot.org/citations/30635240" target=" blank">30635240</a>). In response
to flavivirus infection in neurons, promotes a cell death-independent pathway that restricts viral
replication: together with ZBP1, promotes a death-independent transcriptional program that
modifies the cellular metabolism via up-regulation expression of the enzyme ACOD1/IRG1 and
production of the metabolite itaconate (PubMed:<a
href="http://www.uniprot.org/citations/30635240" target=" blank">30635240</a>). Itaconate
inhibits the activity of succinate dehydrogenase, generating a metabolic state in neurons that
suppresses replication of viral genomes (PubMed:<a
href="http://www.uniprot.org/citations/30635240" target=" blank">30635240</a>). RIPK3 binds
to and enhances the activity of three metabolic enzymes: GLUL, GLUD1, and PYGL (By similarity).
```

These metabolic enzymes may eventually stimulate the tricarboxylic acid cycle and oxidative phosphorylation, which could result in enhanced ROS production (By similarity).

#### **Cellular Location**

Cytoplasm, cytosol. Nucleus. Note=Mainly cytoplasmic (PubMed:32200799, PubMed:32296175). Present in the nucleus in response to influenza A virus (IAV) infection (PubMed:32200799).

#### **Tissue Location**

Expressed in embryo and in adult spleen, liver, testis, heart, brain and lung.

# **RIP3 Antibody - Protocols**

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- <u>Immunohistochemistry</u>
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- Cell Culture

### RIP3 Antibody - Background

Receptor interacting protein including RIP and RIP2/RICK mediate apoptosis induced by TNFR1 and Fas, two prototype members in the death receptor family. A novel member in the RIP kinase family was recently identified and designated RIP3. RIP3 contains N-terminal kinase domain but, unlike RIP or RIP2, lacks the c-terminal death or CARD domain. RIP3 binds to RIP and TNFR1, and mediates TNF-R1 mediated apoptosis, and attenuates RIP and TNFR1 induced NFkB activation. Overexpression of RIP3 induces apoptosis and NFkB activation.
