

FAF1 Antibody

Rabbit Polyclonal Antibody Catalog # ABV10253

Specification

FAF1 Antibody - Product Information

Application Primary Accession Reactivity Host Clonality

Isotype Calculated MW WB, IHC, IP Q9UNN5

Human, Mouse, Rat

Rabbit Polyclonal Rabbit IgG 73954

FAF1 Antibody - Additional Information

Gene ID 11124

Application & Usage Western blotting (0.5-4 μg/ml) and in

immunoprecipitation and

Immunohistochemistry. However, the optimal conditions should be determined individually. Rat kidney cell lysate can be

used as a positive control.

Other Names

FAF1 (CT), Fas-associated protein 1, hFAF1, HFAF1s, TNFRSF6, TNFRSF6 associated factor 1 antibody, FAF1

Target/Specificity

FAF1

Antibody Form

Liquid

Appearance

Colorless liquid

Formulation

 $100~\mu g$ (0.5 mg/ml) affinity purified rabbit anti-FAF1 polyclonal antibody in phosphate buffered saline (PBS), pH 7.2, containing 30% glycerol, 0.5% BSA, 0.01% thimerosal.

Handling

The antibody solution should be gently mixed before use.

Reconstitution & Storage

-20 °C

Background Descriptions

Precautions

FAF1 Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

FAF1 Antibody - Protein Information

Name FAF1

Synonyms UBXD12, UBXN3A

Function

Ubiquitin-binding protein (PubMed:19722279). Required for the progression of DNA replication forks by targeting DNA replication licensing factor CDT1 for degradation (PubMed:26842564). Potentiates but cannot initiate FAS-induced apoptosis (By similarity).

Cellular Location

Nucleus.

Tissue Location

Most abundant in testis, slightly less abundant in skeletal muscle and heart, followed by prostate, thymus, ovary, small intestine, and colon. Not detected in the peripheral blood leukocytes

FAF1 Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- Cell Culture

FAF1 Antibody - Background

FAF1 (Fas-associated protein factor 1) specifically interacts with the cytoplasmic domain of wild type, but not mutated, Fas in both yeast and mammalian cells. When transiently expressed in T cells, FAF1 potentiates Fas-induced apoptosis. In contrast to TRADD, FADD, and RIP, FAF1 lacks a DDH (Death domain homologous region) and cannot induce apoptosis independent of Fas activation.
