

CETP Antibody
Rabbit Polyclonal Antibody
Catalog # ABV10301**Specification**

CETP Antibody - Product Information

Application	WB
Primary Accession	P11597
Reactivity	Human, Mouse, Rat, Rabbit
Host	Rabbit
Clonality	Polyclonal
Isotype	Rabbit IgG
Calculated MW	54756

CETP Antibody - Additional Information**Gene ID** 1071

Application & Usage	Western blotting (0.5-4 µg/ml). However, the optimal concentrations should be determined individually. Jurkat cell lysate can be used as positive controls. The antibody recognizes 70 kDa CETP of human & rat origins.
---------------------	---

Other Names
Cholesteryl ester transfer , HDLCQ10**Target/Specificity**
CETP**Antibody Form**
Liquid**Appearance**
Colorless liquid**Formulation**
100 µg (0.5 mg/ml) peptide affinity purified rabbit polyclonal antibody in phosphate-buffered saline (PBS) containing 30% glycerol, 0.5% BSA, and 0.01% thimerosal.**Handling**
The antibody solution should be gently mixed before use.**Reconstitution & Storage**
-20 °C**Background Descriptions****Precautions**

CETP Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

CETP Antibody - Protein Information

Name CETP ([HGNC:1869](#))

Function

Involved in the transfer of neutral lipids, including cholesteryl ester and triglyceride, among lipoprotein particles. Allows the net movement of cholesteryl ester from high density lipoproteins/HDL to triglyceride-rich very low density lipoproteins/VLDL, and the equimolar transport of triglyceride from VLDL to HDL (PubMed:24293641, PubMed:3281933, PubMed:3600759). Regulates the reverse cholesterol transport, by which excess cholesterol is removed from peripheral tissues and returned to the liver for elimination (PubMed:17237796).

Cellular Location

Secreted. Note=Secreted in plasma

Tissue Location

Expressed by the liver and secreted in plasma.

CETP Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

CETP Antibody - Background

It has been proposed that high density lipoproteins (HDLs) function jointly with lecithin:cholesterol acyltransferase and CETP to facilitate cholesterol transport from tissues to the liver. CETP is responsible for neutral lipid transfer activity in plasma in numerous species. Since CETP is able to accelerate specifically the exchange of lipid components between pro- and anti-atherogenic lipoprotein fractions, it may be a key determinant of the global atherogenicity of the plasma lipoprotein profile and arises as a possible target in atherosclerosis prevention. CETP has an important role in reverse cholesterol transport and shaping and affecting the composition of plasma lipoproteins. In general elevated levels of CETP have been associated with increased risk of coronary heart disease.
