

Phospho-Stat5 Antibody

Rabbit Polyclonal Antibody Catalog # ABV10346

Specification

Phospho-Stat5 Antibody - Product Information

Application WB, IF
Primary Accession P42230
Other Accession NP_035618

Reactivity Human, Mouse, Rat

Host Rabbit
Clonality Polyclonal
Isotype Rabbit IgG
Calculated MW 90831

Phospho-Stat5 Antibody - Additional Information

Gene ID 20850

Application & Usage Western blotting (1-4 μg/ml) and

immunofluorescence (10-20 $\mu g/ml$). However, the optimal concentrations should be determined individually. The

antibody recognizes ~90 kDa

phosphorylated Stat5 (Tyr694) of human, mouse, and rat origins. Reactivity to other

species has not been tested.

Other Names Anti-Stat-5, STAT-5

Target/Specificity Phospho-STAT5

Antibody Form Liquid

AppearanceColorless liquid

Formulation

 $100 \mu g$ (0.5 mg/ml) purified rabbit polyclonal antibody in phosphate-buffered saline (PBS) containing 50% glycerol, 1% BSA, and 0.02% sodium azide.

Handling

The antibody solution should be gently mixed before use.

Reconstitution & Storage -20 °C

Background Descriptions

Precautions

Phospho-Stat5 Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

Phospho-Stat5 Antibody - Protein Information

Name Stat5a

Synonyms Mgf, Mpf

Function

Carries out a dual function: signal transduction and activation of transcription. Mediates cellular responses to the cytokine KITLG/SCF and other growth factors. May mediate cellular responses to activated FGFR1, FGFR2, FGFR3 and FGFR4. Binds to the GAS element and activates PRL-induced transcription. Regulates the expression of milk proteins during lactation.

Cellular Location

Cytoplasm. Nucleus. Note=Translocated into the nucleus in response to phosphorylation

Tissue Location

In the virgin, found in most tissues except brain and muscle. During lactation, abundantly found in mammary tissue, as well as in other secretory organs such as salivary gland and seminal vesicle

Phospho-Stat5 Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- Cell Culture

Phospho-Stat5 Antibody - Background

Membrane receptor signaling by various ligands induces activation of Jak kinases which then leads to tyrosine phosphorylation of the various Stat transcription factors. Stat1 and Stat2 are induced by IFN- α and form a heterodimer which is part of the ISGF3 transcription factor complex. Altho μ gh early reports indicate Stat3 activation by EGF and IL-6, it has been shown that Stat3 β appears to be activated by both while Stat3 α is activated by EGF, but not by IL-6. Highest expression of Stat4 is seen in testis and myeloid cells. IL-12 has been identified as an activator of Stat4. Stat5 is activated by prolactin and by IL-3. Stat6 is involved in IL-4 activated signaling pathways.
