

MLL1 Antibody

Rabbit Polyclonal Antibody Catalog # ABV10615

Specification

MLL1 Antibody - Product Information

Application **Primary Accession**

Reactivity Human, Mouse Host **Rabbit** Clonality **Polyclonal** Isotype Rabbit IgG

MLL1 Antibody - Additional Information

Gene ID 4297

Calculated MW

Application & Usage Western blotting (1:500 - 1:2000).

WB

Q03164

431764

However, the optimal concentrations should be determined individually. K562 nuclear extract can be used as a positive control. The antibody recognizes the MLL1 of human and mouse origins. Reactivity to

other species has not been tested.

Other Names

MLL, MLL1, myeloid/lymphoid or mixed-lineage leukemia, HRX, TRX1, HTRX1, human trithorax 1, ALL-1, acute lymphocytic leukemia 1, CXXC7, HGNC:7132

Target/Specificity

MLL1

Antibody Form

Liquid

Appearance

Colorless liquid

Formulation

100 µl affinity purified rabbit polyclonal antibody in phosphate-buffered saline (PBS) containing 30% glycerol, 0.5% BSA and 0.01% thimerosal.

The antibody solution should be gently mixed before use.

Reconstitution & Storage

-20 °C

Background Descriptions

Precautions

MLL1 Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

MLL1 Antibody - Protein Information

Name KMT2A

Synonyms ALL1, CXXC7, HRX, HTRX, MLL, MLL1, TRX1

Function

```
Histone methyltransferase that plays an essential role in early development and hematopoiesis
(PubMed:<a href="http://www.uniprot.org/citations/15960975" target="_blank">15960975</a>, PubMed:<a href="http://www.uniprot.org/citations/12453419" target="_blank">12453419</a>,

PubMed:<a href="http://www.uniprot.org/citations/21220120" target="_blank">21220120</a>,
PubMed: <a href="http://www.uniprot.org/citations/26886794" target="blank">26886794</a>).
Catalytic subunit of the MLL1/MLL complex, a multiprotein complex that mediates both
methylation of 'Lys- 4' of histone H3 (H3K4me) complex and acetylation of 'Lys-16' of histone H4
(H4K16ac) (PubMed:<a href="http://www.uniprot.org/citations/15960975"
target=" blank">15960975</a>, PubMed:<a href="http://www.uniprot.org/citations/12453419"
target=" blank">12453419</a>, PubMed:<a href="http://www.uniprot.org/citations/15960975"
target=" blank">15960975</a>, PubMed:<a href="http://www.uniprot.org/citations/19556245"

target="blank">24235145</a>, PubMed:<a href="http://www.uniprot.org/citations/19187761"
target="_blank">19187761</a>, PubMed:<a href="http://www.uniprot.org/citations/20677832"
target="blank">20677832</a>, PubMed:<a href="http://www.uniprot.org/citations/21220120"
target="blank">21220120</a>, PubMed:<a href="http://www.uniprot.org/citations/26886794"
target=" blank">26886794</a>). Catalyzes methyl group transfer from S-adenosyl-L-methionine
to the epsilon-amino group of 'Lys-4' of histone H3 (H3K4) via a non-processive mechanism. Part of
chromatin remodeling machinery predominantly forms H3K4me1 and H3K4me2 methylation
marks at active chromatin sites where transcription and DNA repair take place (PubMed: <a
href="http://www.uniprot.org/citations/25561738" target="_blank">25561738</a>, PubMed:<a href="http://www.uniprot.org/citations/15960975" target="_blank">15960975</a>, PubMed:<a
href="http://www.uniprot.org/citations/12453419" target="_blank">12453419</a>, PubMed:<a
href="http://www.uniprot.org/citations/15960975" target="blank">15960975</a>, PubMed:<a
href="http://www.uniprot.org/citations/19556245" target="_blank">19556245</a>, PubMed:<a
href="http://www.uniprot.org/citations/19187761" target="blank">19187761</a>, PubMed:<a
href="http://www.uniprot.org/citations/20677832" target="blank">20677832</a>, PubMed:<a
href="http://www.uniprot.org/citations/21220120" target="_blank">21220120</a>, PubMed:<a
href="http://www.uniprot.org/citations/26886794" target="blank">26886794</a>). Has weak
methyltransferase activity by itself, and requires other component of the MLL1/MLL complex to
obtain full methyltransferase activity (PubMed:<a
href="http://www.uniprot.org/citations/19187761" target="_blank">19187761</a>, PubMed:<a
href="http://www.uniprot.org/citations/26886794" target="blank">26886794</a>). Has no
activity toward histone H3 phosphorylated on 'Thr-3', less activity toward H3 dimethylated on
'Arg-8' or 'Lys-9', while it has higher activity toward H3 acetylated on 'Lys-9' (PubMed:<a
href="http://www.uniprot.org/citations/19187761" target="blank">19187761</a>). Binds to
unmethylated CpG elements in the promoter of target genes and helps maintain them in the
nonmethylated state (PubMed:<a href="http://www.uniprot.org/citations/20010842"
target=" blank">20010842</a>). Required for transcriptional activation of HOXA9 (PubMed:<a
href="http://www.uniprot.org/citations/12453419" target=" blank">12453419</a>, PubMed:<a
href="http://www.uniprot.org/citations/20677832" target="blank">20677832</a>, PubMed:<a
```

href="http://www.uniprot.org/citations/20010842" target=" blank">20010842). Promotes PPP1R15A- induced apoptosis (PubMed: 10490642). Plays a critical role in the control of circadian gene expression and is essential for the transcriptional activation mediated by the CLOCK-BMAL1 heterodimer (By similarity). Establishes a permissive chromatin state for circadian transcription by mediating a rhythmic methylation of 'Lys-4' of histone H3 (H3K4me) and this histone modification directs the circadian acetylation at H3K9 and H3K14 allowing the recruitment of CLOCK-BMAL1 to chromatin (By similarity). Also has auto-methylation activity on Cys-3882 in absence of histone H3 substrate (PubMed:24235145).

Cellular Location

Nucleus [MLL cleavage product C180]: Nucleus. Note=Localizes to a diffuse nuclear pattern when not associated with MLL cleavage product N320

Tissue Location

Heart, lung, brain and T- and B-lymphocytes.

MLL1 Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- <u>Immunohistochemistry</u>
- <u>Immunofluorescence</u>
- <u>Immunoprecipitation</u>
- Flow Cytomety
- Cell Culture

MLL1 Antibody - Background

Eukaryotic RNA polymerase II mediates the synthesis of mature and functional messenger RNA. This is a multistep process, called the transcription cycle, that includes five stages; preinitiation. promoter, clearance, elongation and termination. Elongation is thought to be a critical stage for the regulation of gene expression. ELL (11-19 lysine-rich leukemia protein, also designated MEN) functions as an RNA polymerase II elongation factor that increases the rate of transcription by suppressing transient pausing by RNA polymerase II. Also, ELL is thought to regulate cellular proliferation. ELL is abundantly expressed in peripheral blood leukocytes, skeletal muscle, placenta and testis, and has lower expression in spleen, thymus, heart, brain, lung, kidney, liver and ovary. The gene encoding human ELL, which maps to chromosome 19p13.1, is one of several genes which undergo translocation with the MLL gene on chromosome 11q23 in acute myeloid leukemia. MLL (myeloid/lymphoid leukemia, also designated ALL-1 and HRX) regulates embryonal and hematopoietic development.
