

HP1 α polyclonal antibody
Rabbit Polyclonal Antibody
Catalog # ABV11393**Specification**

HP1 α polyclonal antibody - Product Information

Application	WB, IF
Primary Accession	P45973
Host	Rabbit
Clonality	Polyclonal
Isotype	Rabbit IgG
Calculated MW	22225

HP1 α polyclonal antibody - Additional Information**Gene ID** 23468Positive Control
Application & Usage
Other Names
HP1 α , HP1A**Western blot: HeLa cells, IF: HeLa cells.**
Western Blot: 1:1000, IF: 1:500**Target/Specificity**
HP1 α **Antibody Form**
Liquid**Appearance**
Colorless liquid**Formulation**
In PBS with 0.05% sodium azide and 0.05% ProClin 300.**Handling**
The antibody solution should be gently mixed before use.**Reconstitution & Storage**
-20 °C**Background Descriptions****Precautions**
HP1 α polyclonal antibody is for research use only and not for use in diagnostic or therapeutic procedures.**HP1 α polyclonal antibody - Protein Information**

Name CBX5

Synonyms HP1A

Function

Component of heterochromatin that recognizes and binds histone H3 tails methylated at 'Lys-9' (H3K9me), leading to epigenetic repression. In contrast, it is excluded from chromatin when 'Tyr-41' of histone H3 is phosphorylated (H3Y41ph). Can interact with lamin-B receptor (LBR). This interaction can contribute to the association of the heterochromatin with the inner nuclear membrane. Involved in the formation of functional kinetochore through interaction with MIS12 complex proteins.

Cellular Location

Nucleus. Chromosome. Chromosome, centromere Note=Colocalizes with HNRNPU in the nucleus (PubMed:19617346) Component of centromeric and pericentromeric heterochromatin Associates with chromosomes during mitosis. Associates specifically with chromatin during metaphase and anaphase (PubMed:19617346) Localizes to sites of DNA damage (PubMed:28977666)

HP1α polyclonal antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

HP1α polyclonal antibody - Background

CBX5/HP1 alpha is a component of heterochromatin. It recognizes and binds to histone H3 tails methylated at 'Lys-9', leading to epigenetic repression of transcription. HP1 alpha may also interact with lamin B receptor (LBR), thereby contributing to the association of the heterochromatin with the inner nuclear membrane. Further, HP1 alpha is involved in the formation of a functional kinetochore through interaction with MIS12 complex proteins.
