

#### Lambda Chain

Mouse Monoclonal antibody(Mab)
Catalog # AD80089

## **Specification**

# Lambda Chain - Product info

Application IHC-P
Primary Accession P01701
Reactivity Human
Host Mouse
Clonality Monoclonal
Calculated MW 12249

#### Lambda Chain - Additional info

Gene Name IGLC1 {ECO:0000303|PubMed:11872955, ECO:0000303|Ref.6}

#### **Other Names**

Immunoglobulin lambda variable 1-51 {ECO:0000303|PubMed:11872955, ECO:0000303|Ref.7}, Ig lambda chain V-I region BL2, Ig lambda chain V-I region EPS, Ig lambda chain V-I region NIG-64, IGLV1-51 {ECO:0000303|PubMed:11872955, ECO:0000303|Ref.7}

### **Dilution**

IHC-P~~Ready-to-use

## Storage

Maintain refrigerated at 2-8°C

Precautions Lambda Antibody is for research use only

and not for use in diagnostic or

therapeutic procedures.

#### **Lambda Chain - Protein Information**

Name IGLV1-51 {ECO:0000303|PubMed:11872955, ECO:0000303|Ref.7}

Function Constant region of immunoglobulin light

chains. Immunoglobulins, also known as antibodies, are membrane-bound or secreted glycoproteins produced by B lymphocytes. In the recognition phase of humoral immunity, the membrane-bound immunoglobulins serve as receptors which, upon binding of a specific antigen, trigger the clonal expansion and differentiation of

**B** lymphocytes into

immunoglobulins-secreting plasma cells. Secreted immunoglobulins mediate the effector phase of humoral immunity, which

results in the elimination of bound antigens (PubMed: 22158414, PubMed:20176268). The antigen binding site is formed by the variable domain of one heavy chain, together with that of its associated light chain. Thus, each immunoglobulin has two antigen binding sites with remarkable affinity for a particular antigen. The variable domains are assembled by a process called V-(D)-J rearrangement and can then be subjected to somatic hypermutations which, after exposure to antigen and selection, allow affinity maturation for a particular antigen (PubMed: 17576170, PubMed: 20176268). Secreted. Cell membrane

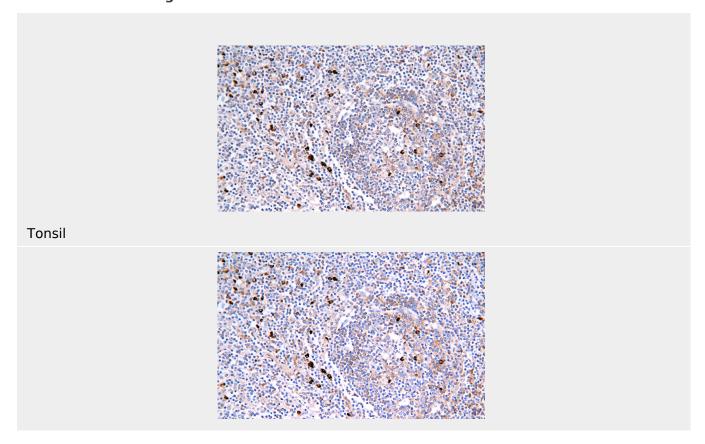

Cellular Location

## **Lambda Chain - Protocols**

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- <u>Immunoprecipitation</u>
- Flow Cytomety
- Cell Culture

Immunohistochemical analysis of paraffin-embedded human tonsil tissue using AD80089 performed on the Abcarta® FAIP-30 Fully automated IHC platform. Tissue was fixed with formaldehyde at room temperature, antigen retrieval was by heat mediation with a Citrate buffer (pH6. 0). Samples were incubated with primary antibody (Ready-to-use) for 15 min at room temperature. AmpSeeTM Detection Systems[Abcepta:AR005] was used as the secondary antibody.
