

EZH2

Rabbit Monoclonal antibody(Mab)
Catalog # AD80174

Specification

EZH2 - Product info

Application IHC-P
Primary Accession Q15910
Reactivity Human
Host Rabbit
Clonality Monoclonal
Calculated MW 85363

EZH2 - Additional info

Gene ID 2146

Gene Name EZH2 (HGNC:3527)

Other Names

Histone-lysine N-methyltransferase EZH2, 2.1.1.356, ENX-1, Enhancer of zeste homolog 2, Lysine N-methyltransferase 6, EZH2 (<a

href="http://www.genenames.org/cgi-bin/gene_symbol_report?hgnc_id=3527"

target=" blank">HGNC:3527), KMT6

Dilution

IHC-P~~N/A

Storage

Maintain refrigerated at 2-8°C

Precautions EZH2 Antibody is for research use only and

not for use in diagnostic or therapeutic

procedures.

EZH2 - Protein Information

Name EZH2 (HGNC:3527)

Synonyms KMT

Function

Polycomb group (PcG) protein. Catalytic subunit of the PRC2/EED-EZH2 complex, which methylates 'Lys-9' (H3K9me) and 'Lys- 27' (H3K27me) of histone H3, leading to transcriptional repression of the affected target gene. Able to mono-, diand trimethylate 'Lys-27' of histone H3 to

form H3K27me1, H3K27me2 and H3K27me3, respectively. Displays a preference for substrates with less methylation, loses activity when

progressively more methyl groups are incorporated into H3K27, H3K27me0 > H3K27me1 > H3K27me2 (PubMed:22323599). Compared to EZH1-containing complexes, it is more abundant in embryonic stem cells and plays a major role in forming H3K27me3, which is required for embryonic stem cell identity and proper differentiation. The PRC2/EED-EZH2 complex may also serve as a recruiting platform for DNA methyltransferases, thereby linking two epigenetic repression systems. Genes repressed by the PRC2/EED-EZH2 complex include HOXC8, HOXA9, MYT1, CDKN2A and retinoic acid target genes. EZH2 can also methylate non- histone proteins such as the transcription factor GATA4 and the nuclear receptor RORA. Regulates the circadian clock via histone methylation at the promoter of the circadian genes. **Essential for the CRY1/2-mediated** repression of the transcriptional activation of PER1/2 by the CLOCK-ARNTL/BMAL1 heterodimer; involved in the di and trimethylation of 'Lys-27' of histone H3 on PER1/2 promoters which is necessary for the CRY1/2 proteins to inhibit transcription. **Nucleus Expressed in many tissues. Overexpressed** in numerous tumor types including

carcinomas of the breast, colon, larynx,

lymphoma and testis.

EZH2 - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- Cell Culture

EZH2 - Images
