Cellular Location

separate granules in hypothalamic POMC neurons, suggesting that secretion may be under the control of different regulatory mechanisms.

Hypophysis

Immunohistochemical analysis of paraffin-embedded human pituitary tissue using AD80249 performed on the Abcarta® FAIP-30 Fully automated IHC platform. Tissue was fixed with formaldehyde at room temperature, antigen retrieval was by heat mediation with a EDTA buffer (pH9.0). Samples were incubated with primary antibody (Ready-to-use) for 15 min at room temperature. AmpSee™ Detection Systems [Abcepta:AR005] was used as the secondary antibody.
