

Goat Anti-Alpha2-antiplasmin Antibody
Peptide-affinity purified goat antibody
Catalog # AF1054a**Specification**

Goat Anti-Alpha2-antiplasmin Antibody - Product Information

Application	IHC, WB, IF, FC
Primary Accession	P08697
Other Accession	NP_000925 , 5345
Reactivity	Human
Host	Goat
Clonality	Polyclonal
Concentration	100ug/200ul
Isotype	IgG
Calculated MW	54566

Goat Anti-Alpha2-antiplasmin Antibody - Additional Information**Gene ID** 5345**Other Names**

Alpha-2-antiplasmin, Alpha-2-AP, Alpha-2-plasmin inhibitor, Alpha-2-PI, Serpin F2, SERPINF2, AAP, PLI

Format

0.5 mg IgG/ml in Tris saline (20mM Tris pH7.3, 150mM NaCl), 0.02% sodium azide, with 0.5% bovine serum albumin

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions

Goat Anti-Alpha2-antiplasmin Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

Goat Anti-Alpha2-antiplasmin Antibody - Protein Information**Name** SERPINF2**Synonyms** AAP, PLI**Function**

Serine protease inhibitor. The major targets of this inhibitor are plasmin and trypsin, but it also inactivates matrilysin- 3/TMPRSS7 and chymotrypsin.

Cellular Location

Secreted.

Tissue Location

Expressed by the liver and secreted in plasma.

Goat Anti-Alpha2-antiplasmin Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

permeabilized with 0.5% Triton. Primary incubation 1hr (10ug/ml) followed by Alexa Fluor 488 secondary antibody (1ug/ml). IgG control: Unimmunized goat IgG (black line) fol

Goat Anti-Alpha2-antiplasmin Antibody - Background

This gene encodes a member of the serpin family of serine protease inhibitors. The protein is a major inhibitor of plasmin, which degrades fibrin and various other proteins. Consequently, the proper function of this gene has a major role in regulating the blood clotting pathway. Mutations in this gene result in alpha-2-plasmin inhibitor deficiency, which is characterized by severe hemorrhagic diathesis. Multiple transcript variants encoding different isoforms have been found for this gene.
