

Goat Anti-ARP2/3 subunit 1B Antibody
Peptide-affinity purified goat antibody
Catalog # AF1108a**Specification**

Goat Anti-ARP2/3 subunit 1B Antibody - Product Information

Application	WB, IHC
Primary Accession	O15143
Other Accession	NP_005711 , 10095
Reactivity	Human
Predicted	Mouse, Rat, Pig, Dog, Cow
Host	Goat
Clonality	Polyclonal
Concentration	100ug/200ul
Isotype	IgG
Calculated MW	40950

Goat Anti-ARP2/3 subunit 1B Antibody - Additional Information**Gene ID** 10095**Other Names**

Actin-related protein 2/3 complex subunit 1B, Arp2/3 complex 41 kDa subunit, p41-ARC, ARPC1B, ARC41

Format

0.5 mg IgG/ml in Tris saline (20mM Tris pH7.3, 150mM NaCl), 0.02% sodium azide, with 0.5% bovine serum albumin

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions

Goat Anti-ARP2/3 subunit 1B Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

Goat Anti-ARP2/3 subunit 1B Antibody - Protein Information**Name** ARPC1B ([HGNC:704](#))**Synonyms** ARC41**Function**

Component of the Arp2/3 complex, a multiprotein complex that mediates actin polymerization upon stimulation by nucleation-promoting factor (NPF) (PubMed:11741539, PubMed:11741539)

[9230079](http://www.uniprot.org/citations/9230079)). The Arp2/3 complex mediates the formation of branched actin networks in the cytoplasm, providing the force for cell motility (PubMed: [11741539](http://www.uniprot.org/citations/11741539), PubMed: [9230079](http://www.uniprot.org/citations/9230079)). In addition to its role in the cytoplasmic cytoskeleton, the Arp2/3 complex also promotes actin polymerization in the nucleus, thereby regulating gene transcription and repair of damaged DNA (PubMed: [29925947](http://www.uniprot.org/citations/29925947)). The Arp2/3 complex promotes homologous recombination (HR) repair in response to DNA damage by promoting nuclear actin polymerization, leading to drive motility of double- strand breaks (DSBs) (PubMed: [29925947](http://www.uniprot.org/citations/29925947)).

Cellular Location

Cytoplasm, cytoskeleton. Nucleus

Goat Anti-ARP2/3 subunit 1B Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

Goat Anti-ARP2/3 subunit 1B Antibody - Images

AF1108a staining (2 µg/ml) of Human Liver lysate (RIPA buffer, 35 µg total protein per lane). Primary incubated for 1 hour. Detected by chemiluminescence.

AF1108a (5 µg/ml) staining of paraffin embedded Human Thymus. Steamed antigen retrieval with citrate buffer pH 6, AP-staining.

Goat Anti-ARP2/3 subunit 1B Antibody - Background

This gene encodes one of seven subunits of the human Arp2/3 protein complex. This subunit is a member of the SOP2 family of proteins and is most similar to the protein encoded by gene ARPC1A. The similarity between these two proteins suggests that they both may function as p41 subunit of the human Arp2/3 complex that has been implicated in the control of actin polymerization in cells. It is possible that the p41 subunit is involved in assembling and maintaining the structure of the Arp2/3 complex. Multiple versions of the p41 subunit may adapt the functions of the complex to different cell types or developmental stages.
