#### **Goat Anti-MST4 Antibody - Protein Information**

### Name STK26 (HGNC:18174)

# **Function**

Serine/threonine-protein kinase that acts as a mediator of cell growth (PubMed:<a href="http://www.uniprot.org/citations/11641781" target="\_blank">11641781</a>, PubMed:<a href="http://www.uniprot.org/citations/17360971" target="\_blank">17360971</a>). Modulates

apoptosis (PubMed:<a href="http://www.uniprot.org/citations/11641781" target="\_blank">11641781</a>, PubMed:<a href="http://www.uniprot.org/citations/17360971" target="\_blank">17360971</a>). In association with STK24 negatively regulates Golgi reorientation in polarized cell migration upon RHO activation (PubMed:<a href="http://www.uniprot.org/citations/27807006" target="\_blank">27807006</a>). Phosphorylates ATG4B at 'Ser- 383', thereby increasing autophagic flux (PubMed:<a href="http://www.uniprot.org/citations/29232556" target="\_blank">29232556</a>).

#### **Cellular Location**

Cytoplasm. Golgi apparatus Note=Colocalized with RIPOR1 in the Golgi of serum-starved cells and relocated to cytoplasmic punctae, probably vesicular compartments, along with RIPOR1 upon serum stimulation in a Rho- and PDCD10-dependent manner (PubMed:27807006).

# Goat Anti-MST4 Antibody - Background

The product of this gene is a member of the GCK group III family of kinases, which are a subset of the Ste20-like kinases. The encoded protein contains an amino-terminal kinase domain, and a carboxy-terminal regulatory domain that mediates homodimerization. The protein kinase localizes

to the Golgi apparatus and is specifically activated by binding to the Golgi matrix protein GM130. It is also cleaved by caspase-3 in vitro, and may function in the apoptotic pathway. Several alternatively spliced transcript variants of this gene have been described, but the full-length nature of some of these variants has not been determined.
