

Goat Anti-SMO (C Terminus) Antibody
Peptide-affinity purified goat antibody
Catalog # AF2009a**Specification**

Goat Anti-SMO (C Terminus) Antibody - Product Information

Application	WB, E
Primary Accession	Q99835
Other Accession	NP_005622 , 6608
Reactivity	Human
Predicted	Dog
Host	Goat
Clonality	Polyclonal
Concentration	100ug/200ul
Isotype	IgG
Calculated MW	86397

Goat Anti-SMO (C Terminus) Antibody - Additional Information**Gene ID** 6608**Other Names**

Smoothened homolog, SMO, Protein Gx, SMO, SMOH

Dilution

WB~~1:1000

E~~N/A

Format

0.5 mg IgG/ml in Tris saline (20mM Tris pH7.3, 150mM NaCl), 0.02% sodium azide, with 0.5% bovine serum albumin

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions

Goat Anti-SMO (C Terminus) Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

Goat Anti-SMO (C Terminus) Antibody - Protein Information**Name** SMO**Synonyms** SMOH**Function**

G protein-coupled receptor which associates with the patched protein (PTCH) to transduce hedgehog protein signaling. Binding of sonic hedgehog (SHH) to its receptor patched prevents inhibition of smoothened (SMO) by patched. When active, SMO binds to and sequesters protein kinase A catalytic subunit PRKACA at the cell membrane, preventing PRKACA-mediated phosphorylation of GLI transcription factors which releases the GLI proteins from PRKACA-mediated inhibition and allows for transcriptional activation of hedgehog pathway target genes (By similarity). Required for the accumulation of KIF7, GLI2 and GLI3 in the cilia (PubMed:19592253). Interacts with DLG5 at the ciliary base to induce the accumulation of KIF7 and GLI2 at the ciliary tip for GLI2 activation (By similarity).

Cellular Location

Cell membrane {ECO:0000250|UniProtKB:P56726}; Multi-pass membrane protein. Cell projection, cilium. Note=Cilium localization is promoted by SHH and is required for activity. {ECO:0000250|UniProtKB:P56726}

Goat Anti-SMO (C Terminus) Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

Goat Anti-SMO (C Terminus) Antibody - Images

A) AF2009a and B) AF2009b (0.3 µg/ml) staining of Human Bone Marrow lysate (35 µg protein in RIPA buffer). Primary incubation was 1 hour. Detected by chemiluminescence.

Goat Anti-SMO (C Terminus) Antibody - Background

The protein encoded by this gene is a G protein-coupled receptor that interacts with the patched protein, a receptor for hedgehog proteins. The encoded protein transduces signals to other proteins after activation by a hedgehog protein/patched protein complex.
