GCIP / MAID Antibody (C-Term) - Protein Information**Name** CCNDBP1**Synonyms** DIP1, GCIP, HHM**Function**

May negatively regulate cell cycle progression. May act at least in part via inhibition of the cyclin-D1/CDK4 complex, thereby preventing phosphorylation of RB1 and blocking E2F-dependent transcription.

Cellular Location

Cytoplasm. Nucleus.

Tissue Location

Ubiquitously expressed. Expression is down-regulated in a variety of tumor types including breast, colon, prostate and rectal tumors, and is up-regulated in certain hepatic carcinomas
