HRASLS / H-REV107 (N term) Antibody (N-Term) - Protein Information**Name** PLAAT1 ([HGNC:14922](#))**Synonyms** HRASLS**Function**

Exhibits both phospholipase A1/2 and acyltransferase activities (PubMed:21880860, PubMed:26503625). Shows phospholipase A1 (PLA1) and A2 (PLA2) activity, catalyzing the calcium-independent release of fatty acids from the sn-1 or sn-2 position of glycerophospholipids (PubMed:<a

[21880860](http://www.uniprot.org/citations/21880860), PubMed: [22825852](http://www.uniprot.org/citations/22825852), PubMed: [27623847](http://www.uniprot.org/citations/27623847)). Shows O-acyltransferase activity, catalyzing the transfer of a fatty acyl group from glycerophospholipid to the hydroxyl group of lysophospholipid (PubMed: [21880860](http://www.uniprot.org/citations/21880860)). Shows N-acyltransferase activity, catalyzing the calcium-independent transfer of a fatty acyl group at the sn-1 position of phosphatidylcholine (PC) and other glycerophospholipids to the primary amine of phosphatidylethanolamine (PE), forming N-acylphosphatidylethanolamine (NAPE) which serves as precursor for N-acylethanolamines (NAEs) (PubMed: [21880860](http://www.uniprot.org/citations/21880860), PubMed: [22825852](http://www.uniprot.org/citations/22825852), PubMed: [27623847](http://www.uniprot.org/citations/27623847)).

Cellular Location

[Isoform 1]: Membrane; Single-pass membrane protein. Cytoplasm

Tissue Location
