IRF4 Antibody (C-Term) - Protein Information

Name IRF4

Synonyms MUM1

Function

Transcriptional activator. Binds to the interferon-stimulated response element (ISRE) of the MHC

class I promoter. Binds the immunoglobulin lambda light chain enhancer, together with PU.1. Probably plays a role in ISRE-targeted signal transduction mechanisms specific to lymphoid cells. Involved in CD8(+) dendritic cell differentiation by forming a complex with the BATF-JUNB heterodimer in immune cells, leading to recognition of AICE sequence (5'-TGAnTCA/GAAA- 3'), an immune-specific regulatory element, followed by cooperative binding of BATF and IRF4 and activation of genes (By similarity).

Cellular Location

Nucleus.

Tissue Location

Lymphoid cells.
