

**Goat anti-BRD4 Antibody**  
**Peptide-affinity purified goat antibody**  
**Catalog # AF4462a****Specification**

---

**Goat anti-BRD4 Antibody - Product Information**

Application	WB, Pep-ELISA
Primary Accession	<a href="#">O60885</a>
Other Accession	<a href="#">NP_490597.1</a> , <a href="#">NP_055114.1</a>
Reactivity	Human, Mouse, Rat, Dog
Host	Goat
Clonality	Polyclonal
Calculated MW	152219

**Goat anti-BRD4 Antibody - Additional Information****Gene ID** 23476**Other Names**

BRD4; bromodomain containing 4; CAP; HUNK1; HUNKI; MCAP; bromodomain-containing 4; bromodomain-containing protein 4; chromosome-associated protein

**Dilution**WB~~1:1000  
Pep-ELISA~~N/A**Format**

Supplied at 0.5 mg/ml in Tris saline, 0.02% sodium azide, pH7.3 with 0.5% bovine serum albumin. Aliquot and store at -20°C. Minimize freezing and thawing.

**Immunogen**

This antibody is expected to recognize both reported isoforms (NP\_490597.1; NP\_055114.1).

**Storage**

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

**Precautions**

Goat anti-BRD4 Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

**Goat anti-BRD4 Antibody - Protein Information****Name** BRD4**Synonyms** HUNK1

## Function

Chromatin reader protein that recognizes and binds acetylated histones and plays a key role in transmission of epigenetic memory across cell divisions and transcription regulation (PubMed:<a href="http://www.uniprot.org/citations/20871596" target="\_blank">20871596</a>, PubMed:<a href="http://www.uniprot.org/citations/23086925" target="\_blank">23086925</a>, PubMed:<a href="http://www.uniprot.org/citations/23317504" target="\_blank">23317504</a>, PubMed:<a href="http://www.uniprot.org/citations/29176719" target="\_blank">29176719</a>, PubMed:<a href="http://www.uniprot.org/citations/29379197" target="\_blank">29379197</a>). Remains associated with acetylated chromatin throughout the entire cell cycle and provides epigenetic memory for postmitotic G1 gene transcription by preserving acetylated chromatin status and maintaining high-order chromatin structure (PubMed:<a href="http://www.uniprot.org/citations/22334664" target="\_blank">22334664</a>, PubMed:<a href="http://www.uniprot.org/citations/23317504" target="\_blank">23317504</a>, PubMed:<a href="http://www.uniprot.org/citations/23589332" target="\_blank">23589332</a>). During interphase, plays a key role in regulating the transcription of signal-inducible genes by associating with the P-TEFb complex and recruiting it to promoters (PubMed:<a href="http://www.uniprot.org/citations/16109376" target="\_blank">16109376</a>, PubMed:<a href="http://www.uniprot.org/citations/16109377" target="\_blank">16109377</a>, PubMed:<a href="http://www.uniprot.org/citations/19596240" target="\_blank">19596240</a>, PubMed:<a href="http://www.uniprot.org/citations/23589332" target="\_blank">23589332</a>, PubMed:<a href="http://www.uniprot.org/citations/24360279" target="\_blank">24360279</a>). Also recruits P-TEFb complex to distal enhancers, so called anti-pause enhancers in collaboration with JMJD6 (PubMed:<a href="http://www.uniprot.org/citations/16109376" target="\_blank">16109376</a>, PubMed:<a href="http://www.uniprot.org/citations/16109377" target="\_blank">16109377</a>, PubMed:<a href="http://www.uniprot.org/citations/19596240" target="\_blank">19596240</a>, PubMed:<a href="http://www.uniprot.org/citations/23589332" target="\_blank">23589332</a>, PubMed:<a href="http://www.uniprot.org/citations/24360279" target="\_blank">24360279</a>). BRD4 and JMJD6 are required to form the transcriptionally active P-TEFb complex by displacing negative regulators such as HEXIM1 and 7SKsnRNA complex from P-TEFb, thereby transforming it into an active form that can then phosphorylate the C-terminal domain (CTD) of RNA polymerase II (PubMed:<a href="http://www.uniprot.org/citations/16109376" target="\_blank">16109376</a>, PubMed:<a href="http://www.uniprot.org/citations/16109377" target="\_blank">16109377</a>, PubMed:<a href="http://www.uniprot.org/citations/19596240" target="\_blank">19596240</a>, PubMed:<a href="http://www.uniprot.org/citations/23589332" target="\_blank">23589332</a>, PubMed:<a href="http://www.uniprot.org/citations/24360279" target="\_blank">24360279</a>). Regulates differentiation of naive CD4(+) T-cells into T-helper Th17 by promoting recruitment of P-TEFb to promoters (By similarity). Promotes phosphorylation of 'Ser-2' of the C-terminal domain (CTD) of RNA polymerase II (PubMed:<a href="http://www.uniprot.org/citations/23086925" target="\_blank">23086925</a>). According to a report, directly acts as an atypical protein kinase and mediates phosphorylation of 'Ser-2' of the C-terminal domain (CTD) of RNA polymerase II; these data however need additional evidences in vivo (PubMed:<a href="http://www.uniprot.org/citations/22509028" target="\_blank">22509028</a>). In addition to acetylated histones, also recognizes and binds acetylated RELA, leading to further recruitment of the P-TEFb complex and subsequent activation of NF-kappa-B (PubMed:<a href="http://www.uniprot.org/citations/19103749" target="\_blank">19103749</a>). Also acts as a regulator of p53/TP53-mediated transcription: following phosphorylation by CK2, recruited to p53/TP53 specific target promoters (PubMed:<a href="http://www.uniprot.org/citations/23317504" target="\_blank">23317504</a>).

## Cellular Location

Nucleus. Chromosome. Note=Associates with acetylated chromatin (PubMed:16109376, PubMed:21890894). Released from chromatin upon deacetylation of histones that can be triggered by different signals such as activation of the JNK pathway or nocodazole treatment (PubMed:16109376, PubMed:21890894). Preferentially localizes to mitotic chromosomes, while it does not localize to meiotic chromosomes (PubMed:16109376, PubMed:21890894).

## Tissue Location

Ubiquitously expressed.

### **Goat anti-BRD4 Antibody - Protocols**

Provided below are standard protocols that you may find useful for product applications.
