# **Function**

Arginine methyltransferase that can both catalyze the formation of omega-N monomethylarginine (MMA) and symmetrical dimethylarginine (sDMA), with a preference for the formation of MMA (PubMed:<a href="http://www.uniprot.org/citations/10531356" target="\_blank">10531356</a>, PubMed:<a href="http://www.uniprot.org/citations/11152681" target="\_blank">11152681</a>, PubMed:<a href="http://www.uniprot.org/citations/11747828" target="\_blank">11747828</a>, PubMed:<a href="http://www.uniprot.org/citations/12411503" target="\_blank">12411503</a>,

Specifically mediates the symmetrical dimethylation of arginine residues in the small nuclear
ribonucleoproteins Sm D1 (SNRPD1) and Sm D3 (SNRPD3); such methylation being required for the
assembly and biogenesis of snRNP core particles (PubMed: <a
href="http://www.uniprot.org/citations/11747828" target=" blank">11747828</a>, PubMed:<a
href="http://www.uniprot.org/citations/12411503" target=" blank">12411503</a>, PubMed:<a
href="http://www.uniprot.org/citations/17709427" target="blank">17709427</a>). Methylates
SUPT5H and may regulate its transcriptional elongation properties (PubMed:<a
href="http://www.uniprot.org/citations/12718890" target=" blank">12718890</a>). May
methylate the N-terminal region of MBD2 (PubMed:<a
href="http://www.uniprot.org/citations/16428440" target=" blank">16428440</a>). Mono- and
dimethylates arginine residues of myelin basic protein (MBP) in vitro. May play a role in
cytokine-activated transduction pathways. Negatively regulates cyclin E1 promoter activity and
cellular proliferation. Methylates histone H2A and H4 'Arg-3' during germ cell development (By
similarity). Methylates histone H3 'Arg-8', which may repress transcription (By similarity).
Methylates the Piwi proteins (PIWIL1, PIWIL2 and PIWIL4), methylation of Piwi proteins being
required for the interaction with Tudor domain-containing proteins and subsequent localization to
the meiotic nuage (By similarity). Methylates RPS10. Attenuates EGF signaling through the
MAPK1/MAPK3 pathway acting at 2 levels. First, monomethylates EGFR; this enhances EGFR
'Tyr-1197' phosphorylation and PTPN6 recruitment, eventually leading to reduced SOS1
phosphorylation (PubMed: <a href="http://www.uniprot.org/citations/21258366"
target=" blank">21258366</a>, PubMed:<a href="http://www.uniprot.org/citations/21917714"
target="blank">21917714</a>). Second, methylates RAF1 and probably BRAF, hence
destabilizing these 2 signaling proteins and reducing their catalytic activity (PubMed: <a
href="http://www.uniprot.org/citations/21917714" target=" blank">21917714</a>). Required for
induction of E-selectin and VCAM-1, on the endothelial cells surface at sites of inflammation.
Methylates HOXA9 (PubMed:<a href="http://www.uniprot.org/citations/22269951"
target=" blank">22269951</a>). Methylates and regulates SRGAP2 which is involved in cell
migration and differentiation (PubMed: <a href="http://www.uniprot.org/citations/20810653"
target=" blank">20810653</a>). Acts as a transcriptional corepressor in CRY1-mediated
repression of the core circadian component PER1 by regulating the H4R3 dimethylation at the
PER1 promoter (By similarity). Methylates GM130/GOLGA2, regulating Golgi ribbon formation
(PubMed:<a href="http://www.uniprot.org/citations/20421892" target="_blank">20421892</a>).
Methylates H4R3 in genes involved in glioblastomagenesis in a CHTOP- and/or TET1-dependent
manner (PubMed: <a href="http://www.uniprot.org/citations/25284789"
target=" blank">25284789</a>). Symmetrically methylates POLR2A, a modification that allows
the recruitment to POLR2A of proteins including SMN1/SMN2 and SETX. This is required for
resolving RNA-DNA hybrids created by RNA polymerase II, that form R-loop in transcription
terminal regions, an important step in proper transcription termination (PubMed: <a
href="http://www.uniprot.org/citations/26700805" target=" blank">26700805</a>). Along with
LYAR, binds the promoter of gamma-globin HBG1/HBG2 and represses its expression (PubMed: <a
href="http://www.uniprot.org/citations/25092918" target="blank">25092918</a>).
Symmetrically methylates NCL (PubMed: <a href="http://www.uniprot.org/citations/21081503"
target=" blank">21081503</a>). Methylates p53/TP53; methylation might possibly affect
p53/TP53 target gene specificity (PubMed:<a href="http://www.uniprot.org/citations/19011621"
target=" blank">19011621</a>). Involved in spliceosome maturation and mRNA splicing in
prophase I spermatocytes through the catalysis of the symmetrical arginine dimethylation of
SNRPB (small nuclear ribonucleoprotein- associated protein) and the interaction with tudor
domain-containing protein TDRD6 (By similarity).
