**KO-Validated Anti-14-3-3 alpha/beta Rabbit Monoclonal Antibody - Protein Information****Name** YWHAB**Function**

Adapter protein implicated in the regulation of a large spectrum of both general and specialized signaling pathways. Binds to a large number of partners, usually by recognition of a phosphoserine or phosphothreonine motif. Binding generally results in the modulation of the activity of the binding partner. Negative regulator of osteogenesis. Blocks the nuclear translocation of the phosphorylated form (by AKT1) of SRPK2 and antagonizes its stimulatory effect on cyclin D1

expression resulting in blockage of neuronal apoptosis elicited by SRPK2. Negative regulator of signaling cascades that mediate activation of MAP kinases via AKAP13.

#### Cellular Location

Cytoplasm. Melanosome. Note=Identified by mass spectrometry in melanosome fractions from stage I to stage IV

Western blotting analysis using anti-14-3-3 alpha/beta antibody (Cat#AGI2426). Total cell lysates (30 µg) from various cell lines were loaded and separated by SDS-PAGE. The blot was incubated with anti-14-3-3 alpha/beta antibody (Cat#AGI2426, 1:5,000) and HRP-conjugated goat anti-rabbit secondary antibody respectively.
