

CD20 Antibody [Clone B9E9]

Purified Mouse Monoclonal Antibody Catalog # AH10076

Specification

CD20 Antibody [Clone B9E9] - Product Information

Application FC
Primary Accession P11836
Reactivity Human
Host Mouse
Clonality Monoclonal
Isotype IgG2a, kappa
Calculated MW 33-37kDa KDa

CD20 Antibody [Clone B9E9] - Additional Information

Gene ID 931

Other Names

B-lymphocyte antigen CD20, B-lymphocyte surface antigen B1, Bp35, Leukocyte surface antigen Leu-16, Membrane-spanning 4-domains subfamily A member 1, CD20, MS4A1, CD20

Target/Specificity

Lymphoblastoid cell line Daudi

Application Note

FC~~1:10~50

Format

0.5 ml at 100ug/ml; Conjugated to AF488

Storage

Store at 2 to 8°C. Antibody is stable for 24 months.

Precautions

CD20 Antibody [Clone B9E9] is for research use only and not for use in diagnostic or therapeutic procedures.

CD20 Antibody [Clone B9E9] - Protein Information

Name MS4A1

Synonyms CD20

Function

B-lymphocyte-specific membrane protein that plays a role in the regulation of cellular calcium influx necessary for the development, differentiation, and activation of B-lymphocytes (PubMed:12920111, PubMed:<a

href="http://www.uniprot.org/citations/3925015" target="_blank">3925015, PubMed:7684739). Functions as a store-operated calcium (SOC) channel component promoting calcium influx after activation by the B-cell receptor/BCR (PubMed:12920111, PubMed:18474602, PubMed:<a href="http://www.uniprot.org/citations/7684739"

Cellular Location

target=" blank">7684739).

Cell membrane; Multi-pass membrane protein. Cell membrane; Lipid-anchor. Note=Constitutively associated with membrane rafts.

Tissue Location

Expressed on B-cells.

CD20 Antibody [Clone B9E9] - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- <u>Immunoprecipitation</u>
- Flow Cytomety
- Cell Culture

CD20 Antibody [Clone B9E9] - Background

Recognizes a protein of 33-37kDa, identified as CD20 (Workshop V; Code CD20.12). B9E9 recognizes extracellular domain of CD20. The epitope is similar to or identical to that recognized by other CD20 antibodies including Leu-16 and B1. This MAb can be used for immunophenotyping of leukemia and malignant cells, B lymphocyte detection in peripheral blood, B cell localization in tissues and B lymphocyte purification by immunosorbent methods. CD20 is a non-lg differentiation antigen of B-cells and its expression is restricted to normal and neoplastic B-cells, being absent from all other leukocytes and tissues. CD20 is expressed by pre B-cells and persists during all stages of B-cell maturation but is lost upon terminal differentiation into plasma cells. Protein passes through the membrane 4 times with both ends in cytoplasm and exposes one short and one longer loop to the external environment. CD20 is not glycosylated in resting B cells and its cytoplasmic domains are differentially phosphorylated upon activation. It acts as a calcium channel involved in B-cell activation and cell cycle progression.
