

IDH1 (Isocitrate Dehydrogenase) Antibody - With BSA and Azide
Mouse Monoclonal Antibody [Clone IDH1/1152]
Catalog # AH11495**Specification****IDH1 (Isocitrate Dehydrogenase) Antibody - With BSA and Azide - Product Information**

Application	WB, IHC, IF, FC
Primary Accession	075874
Other Accession	3417 , 593422
Reactivity	Human
Host	Mouse
Clonality	Monoclonal
Isotype	Mouse / IgG1, kappa
Calculated MW	45-47kDa KDa

IDH1 (Isocitrate Dehydrogenase) Antibody - With BSA and Azide - Additional Information**Gene ID** 3417**Other Names**

Isocitrate dehydrogenase [NADP] cytoplasmic, IDH, 1.1.1.42, Cytosolic NADP-isocitrate dehydrogenase, IDP, NADP(+)-specific ICDH, Oxalosuccinate decarboxylase, IDH1, PICD

Application Note

WB~1:1000
IHC~1:100~500
IF~1:50~200
FC~1:10~50

Storage

Store at 2 to 8°C. Antibody is stable for 24 months.

Precautions

IDH1 (Isocitrate Dehydrogenase) Antibody - With BSA and Azide is for research use only and not for use in diagnostic or therapeutic procedures.

IDH1 (Isocitrate Dehydrogenase) Antibody - With BSA and Azide - Protein Information**Name** IDH1**Synonyms** PICD**Function**

Catalyzes the NADP(+)-dependent oxidative decarboxylation of isocitrate (D-threo-isocitrate) to 2-ketoglutarate (2-oxoglutarate), which is required by other enzymes such as the phytanoyl-CoA dioxygenase (PubMed: [10521434](http://www.uniprot.org/citations/10521434)), PubMed: [19935646](http://www.uniprot.org/citations/19935646)). Plays a critical role in the generation of NADPH, an important cofactor in many biosynthesis pathways (PubMed: [10521434](#)).

<http://www.uniprot.org/citations/10521434>). May act as a corneal epithelial crystallin and may be involved in maintaining corneal epithelial transparency (By similarity).

Cellular Location

Cytoplasm, cytosol. Peroxisome

IDH1 (Isocitrate Dehydrogenase) Antibody - With BSA and Azide - Protocols

Provided below are standard protocols that you may find useful for product applications.

IDH1 (Isocitrate Dehydrogenase) Antibody - With BSA and Azide - Background

It recognizes a 45kDa protein, which is identified as isocitrate dehydrogenase (IDH1). It belongs to the isocitrate and isopropylmalate dehydrogenases family. IDH1 catalyzes the third step of the citric acid cycle, which involves the oxidative decarboxylation of isocitrate, forming α -ketoglutarate and CO₂ in a two-step reaction. The first step involves the oxidation of isocitrate to the intermediate oxalosuccinate, while the second step involves the production of α -ketoglutarate. During this process, either NADH or NADPH is produced along with CO₂. Recently, an inactivating mutation of IDH1 has been implicated in glioblastoma. IDH1 appears to function as a tumor suppressor that, when mutationally inactivated, contributes to tumorigenesis in part through induction of the HIF-1 pathway.
