

Interferon alpha-1 (IFNA1) Antibody - With BSA and Azide
Mouse Monoclonal Antibody [Clone 2.52]
Catalog # AH11499**Specification**

Interferon alpha-1 (IFNA1) Antibody - With BSA and Azide - Product Information

Application	IF, FC
Primary Accession	P01562
Other Accession	3439 , 37026 , 533471
Reactivity	Human
Host	Mouse
Clonality	Monoclonal
Isotype	Mouse / IgG1, kappa
Calculated MW	16-27kDa KDa

Interferon alpha-1 (IFNA1) Antibody - With BSA and Azide - Additional Information**Gene ID** 3439;3447**Other Names**

Interferon alpha-1/13, IFN-alpha-1/13, Interferon alpha-D, LeIF D, IFNA1

Application Note

IF~~1:50~200<br \>FC~~1:10~50

Storage

Store at 2 to 8°C. Antibody is stable for 24 months.

Precautions

Interferon alpha-1 (IFNA1) Antibody - With BSA and Azide is for research use only and not for use in diagnostic or therapeutic procedures.

Interferon alpha-1 (IFNA1) Antibody - With BSA and Azide - Protein Information**Name** IFNA1**Function**

Produced by macrophages, IFN-alpha have antiviral activities. Interferon stimulates the production of two enzymes: a protein kinase and an oligoadenylate synthetase.

Cellular Location

Secreted.

Interferon alpha-1 (IFNA1) Antibody - With BSA and Azide - Protocols

Provided below are standard protocols that you may find useful for product applications.

- [Western Blot](#)
- [Blocking Peptides](#)
- [Dot Blot](#)
- [Immunohistochemistry](#)
- [Immunofluorescence](#)
- [Immunoprecipitation](#)
- [Flow Cytometry](#)
- [Cell Culture](#)

Interferon alpha-1 (IFNA1) Antibody - With BSA and Azide - Background

This MAb is specific for human interferon alpha 1 and does not cross react with human interferon alpha 2. Interferons are widely used therapeutic agents because of their anti-tumor and anti-viral effects and because of their modulatory effects on the immune system. These cytokines produce their effects by binding to the Type 1 Interferon- & Receptor (IFNAR1). Down regulation of this receptor plays a key role in determining the magnitude and duration of cytokine signaling. This down regulation is influenced by phosphorylation of Serine 535 and 539 in the IFNAR1.
