

# CD25 / IL2RA (Activated Lymphocyte Marker) Antibody - With BSA and Azide

Mouse Monoclonal Antibody [Clone 143-13] Catalog # AH11574

# **Specification**

# CD25 / IL2RA (Activated Lymphocyte Marker) Antibody - With BSA and Azide - Product Information

Application IF, FC
Primary Accession P01589
Other Accession 3559, 231367

Reactivity Human
Host Mouse
Clonality Monoclonal

Isotype Mouse / IgG1, kappa

Calculated MW 55kDa KDa

# CD25 / IL2RA (Activated Lymphocyte Marker) Antibody - With BSA and Azide - Additional Information

#### **Gene ID 3559**

# **Other Names**

Interleukin-2 receptor subunit alpha, IL-2 receptor subunit alpha, IL-2-RA, IL-2R subunit alpha, IL2-RA, TAC antigen, p55, CD25, IL2RA

### **Application Note**

<span class ="dilution\_IF">IF~~1:50~200</span><br \> <span class ="dilution FC">FC~~1:10~50</span>

#### Storage

Store at 2 to 8°C. Antibody is stable for 24 months.

#### **Precautions**

CD25 / IL2RA (Activated Lymphocyte Marker) Antibody - With BSA and Azide is for research use only and not for use in diagnostic or therapeutic procedures.

# CD25 / IL2RA (Activated Lymphocyte Marker) Antibody - With BSA and Azide - Protein Information

### Name IL2RA

# **Function**

Receptor for interleukin-2. The receptor is involved in the regulation of immune tolerance by controlling regulatory T cells (TREGs) activity. TREGs suppress the activation and expansion of autoreactive T-cells.

#### **Cellular Location**

Membrane; Single-pass type I membrane protein.

# CD25 / IL2RA (Activated Lymphocyte Marker) Antibody - With BSA and Azide - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- Cell Culture

CD25 / IL2RA (Activated Lymphocyte Marker) Antibody - With BSA and Azide - Images

# CD25 / IL2RA (Activated Lymphocyte Marker) Antibody - With BSA and Azide - Background

Recognizes a protein of 55kDa, identified as CD25 (Workshop IV; Code A27). CD25 is expressed on activated T- and B-cells and activated monocytes/macrophages. With respect to lymphomas, CD25 is present on malignant cells of Hodgkin's disease, HTLV-1+ adult T-cell leukemia, cutaneous T-cell lymphoma, and hair cell leukemia. Increased levels of soluble CD25 are observed in the leukemias/lymphomas and inflammatory/ autoimmune diseases. CD25 molecule alone appears to function as a low affinity receptor and associates with CD122 (IL-2R |�� �� chain, p75) and CD132 (common |�� �� chain) to form the high affinity IL-2 receptor complex. CD25 antibodies detect three epitope regions, A, B and C. This MAb recognizes the epitope B, which is located at residue 3-104 of CD25 and can effectively block IL-2 binding to CD25.
