

Nucleolin (Marker of Human Cells) Antibody - With BSA and Azide Mouse Monoclonal Antibody [Clone NCL/902] Catalog # AH11978

Specification

Nucleolin (Marker of Human Cells) Antibody - With BSA and Azide - Product Information

Application Primary Accession Other Accession Reactivity Host Clonality Isotype Calculated MW WB, IHC, IF, FC <u>P19338</u> <u>4691</u>, <u>79110</u> Human Mouse Monoclonal Mouse / IgG1, kappa 76kDa KDa

Nucleolin (Marker of Human Cells) Antibody - With BSA and Azide - Additional Information

Gene ID 4691

Other Names Nucleolin, Protein C23, NCL

Application Note WB~~1:1000<br \>IHC~~1:100~500<br \>IF~~1:50~200<br \>FC~~1:10~50

Storage Store at 2 to 8°C.Antibody is stable for 24 months.

Precautions Nucleolin (Marker of Human Cells) Antibody - With BSA and Azide is for research use only and not for use in diagnostic or therapeutic procedures.

Nucleolin (Marker of Human Cells) Antibody - With BSA and Azide - Protein Information

Name NCL

Function

Nucleolin is the major nucleolar protein of growing eukaryotic cells. It is found associated with intranucleolar chromatin and pre-ribosomal particles. It induces chromatin decondensation by binding to histone H1. It is thought to play a role in pre-rRNA transcription and ribosome assembly. May play a role in the process of transcriptional elongation. Binds RNA oligonucleotides with 5'-UUAGGG- 3' repeats more tightly than the telomeric single-stranded DNA 5'- TTAGGG-3' repeats.

Cellular Location

Nucleus, nucleolus. Cytoplasm. Note=Localized in cytoplasmic mRNP granules containing untranslated mRNAs

Nucleolin (Marker of Human Cells) Antibody - With BSA and Azide - Protocols

Provided below are standard protocols that you may find useful for product applications.

- <u>Western Blot</u>
- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- <u>Cell Culture</u>

Formalin-fixed, paraffin-embedded human Bladder carcinoma stained with Nucleolin Monoclonal Antibody (NCL/902).

Formalin-fixed, paraffin-embedded human Ovarian Carcinoma stained with Nucleolin Monoclonal Antibody (NCL/902).

Formalin-fixed, paraffin-embedded human Testicular Carcinoma stained with Nucleolin Monoclonal Antibody (NCL/902).

Flow Cytometry of Human Nucleolin Ag on 293T Cells. Black: Cells alone; Grey: Isotype Control; Green: AF488-labeled Nucleolin Monoclonal Antibody (NCL/902).

HeLa Cells stained with AF488 labeled Nucleolin Monoclonal Antibody (NCL/902) Green: AF488-labeled Ab. Blue: DAPI.

Flow Cytometry of Human Nucleolin Ag on Jurkat Cells. Grey: Isotype Control; Green: FITC-labeled; Purple: APC-Labeled; Turcoise: AF700-Labeled Nucleolin Monoclonal Antibody (NCL/902).

Nucleolin (Marker of Human Cells) Antibody - With BSA and Azide - Background

Recognizes a protein of ~76kDa, which is identified as Nucleolin (NCL). It is the major nucleolar phosphoprotein of growing eukaryotic cells. NCL is located mainly in dense fibrillar regions of the nucleolus. It is found associated with intranucleolar chromatin and pre-ribosomal particles. Human NCL gene consists of 14 exons with 13 introns and spans approximately 11kb. It induces chromatin decondensation by binding to histone H1. It is thought to play a role in pre-rRNA transcription and ribosome assembly.ĀThis MAb can be used to stain the nucleoli in cell or tissue preparations and can be used as a marker of the nucleoli in subcellular fractions. It produces a speckled pattern in the nuclei of cells of normal and malignant cells and may be used to stain the nucleoli of cells in fixed or frozen tissue sections. It can be used with paraformaldehyde fixed frozen tissue or cell preparations and formalin fixed, paraffin-embedded tissue sections.
