### CD70 / TNFSF7 (Activated T- & B-Lymphocyte Marker) Antibody - With BSA and Azide - Protein Information

Name CD70 (<u>HGNC:11937</u>)

Function

Expressed at the plasma membrane of B cells, it is the ligand of the CD27 receptor which is specifically expressed at the surface of T cells (PubMed:<a href="http://www.uniprot.org/citations/28011863" target="\_blank">28011863</a>, PubMed:<a href="http://www.uniprot.org/citations/28011864" target="\_blank">28011863</a>, PubMed:<a

href="http://www.uniprot.org/citations/8387892" target="\_blank">8387892</a>). The CD70-CD27 signaling pathway mediates antigen-specific T cell activation and expansion which in turn provides immune surveillance of B cells (PubMed:<a href="http://www.uniprot.org/citations/28011863" target="\_blank">28011863</a>, PubMed:<a href="http://www.uniprot.org/citations/28011864" target="\_blank">28011863</a>, PubMed:<a

**Cellular Location** 

Cell membrane; Single-pass type II membrane protein

# CD70 / TNFSF7 (Activated T- & B-Lymphocyte Marker) Antibody - With BSA and Azide - Background

It recognizes a protein of 30kDa, identified as CD70. It is a cytokine that belongs to the tumor necrosis factor (TNF) ligand family. This cytokine is a ligand for TNFRSF27/CD27. It is a surface antigen on activated, but not on resting, T- and B-lymphocytes. It induces proliferation of co-stimulated T cells, enhances the generation of cytolytic T cells, and contributes to T cell activation. This cytokine is also reported to play a role in regulating B-cell activation, cytotoxic function of natural killer cells, and immunoglobulin synthesis. This MAb blocks the interaction between CD27 and CD70, and has been shown toĀinhibit T cell proliferation induced by dendritic cells.
