

SATB1 antibody - middle region

Rabbit Polyclonal Antibody Catalog # Al10503

Specification

SATB1 antibody - middle region - Product Information

Application WB
Primary Accession Q01826

Other Accession NM 002971, NP 002962

Reactivity Human, Mouse, Rat, Pig, Dog

Predicted Human, Mouse, Rat, Pig, Chicken, Guinea

Pig, Dog Rabbit Polyclonal 86kDa KDa

Host Clonality Calculated MW

SATB1 antibody - middle region - Additional Information

Gene ID 6304

Other Names

DNA-binding protein SATB1, Special AT-rich sequence-binding protein 1, SATB1

Format

Liquid. Purified antibody supplied in 1x PBS buffer with 0.09% (w/v) sodium azide and 2% sucrose.

Reconstitution & Storage

Add 50 ul of distilled water. Final anti-SATB1 antibody concentration is 1 mg/ml in PBS buffer with 2% sucrose. For longer periods of storage, store at 20°C. Avoid repeat freeze-thaw cycles.

Precautions

SATB1 antibody - middle region is for research use only and not for use in diagnostic or therapeutic procedures.

SATB1 antibody - middle region - Protein Information

Name SATB1 (HGNC:10541)

Function

Crucial silencing factor contributing to the initiation of X inactivation mediated by Xist RNA that occurs during embryogenesis and in lymphoma (By similarity). Binds to DNA at special AT-rich sequences, the consensus SATB1-binding sequence (CSBS), at nuclear matrix- or scaffold-associated regions. Thought to recognize the sugar-phosphate structure of double-stranded DNA. Transcriptional repressor controlling nuclear and viral gene expression in a phosphorylated and acetylated status-dependent manner, by binding to matrix attachment regions (MARs) of DNA and inducing a local chromatin-loop remodeling. Acts as a docking site for several chromatin remodeling enzymes (e.g. PML at the MHC-I locus) and also by recruiting corepressors (HDACs) or coactivators (HATs) directly to promoters and enhancers. Modulates

genes that are essential in the maturation of the immune T-cell CD8SP from thymocytes. Required for the switching of fetal globin species, and beta- and gamma-globin genes regulation during erythroid differentiation. Plays a role in chromatin organization and nuclear architecture during apoptosis. Interacts with the unique region (UR) of cytomegalovirus (CMV). Alu-like motifs and SATB1-binding sites provide a unique chromatin context which seems preferentially targeted by the HIV-1 integration machinery. Moreover, HIV-1 Tat may overcome SATB1- mediated repression of IL2 and IL2RA (interleukin) in T-cells by binding to the same domain than HDAC1. Delineates specific epigenetic modifications at target gene loci, directly up-regulating metastasis- associated genes while down-regulating tumor-suppressor genes. Reprograms chromatin organization and

Cellular Location

Nucleus matrix. Nucleus, PML body. Note=Organized into a cage-like network anchoring loops of heterochromatin and tethering specialized DNA sequences (PubMed:12692553). When sumoylated, localized in promyelocytic leukemia nuclear bodies (PML NBs) (PubMed:18408014)

the transcription profiles of breast tumors to promote growth and metastasis. Promotes neuronal

differentiation of neural stem/progenitor cells in the adult subventricular zone, possibly by

positively regulating the expression of NEUROD1 (By similarity).

Tissue Location

Expressed predominantly in thymus.

SATB1 antibody - middle region - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- <u>Immunofluorescence</u>
- Immunoprecipitation
- Flow Cytomety
- Cell Culture
