**EBF1 Antibody - Protein Information****Name** EBF1**Synonyms** COE1, EBF**Function**

Key pioneer transcription factor of B-cell specification and commitment (PubMed:[27807034](http://www.uniprot.org/citations/27807034)). Recognizes variations of the palindromic sequence 5'-ATTCCCNNGGAATT-3'. Operates in a transcription factor network to activate B-cell-specific genes and repress genes associated with alternative cell fates. For instance, positively regulates many B- cell specific genes including BCR or CD40 while repressing genes that direct cells into alternative lineages, including GATA3 and TCF7 for the T-cell lineage. In addition to its role during lymphopoiesis, controls the thermogenic gene program in

adipocytes during development and in response to environmental cold (By similarity).
