Casp2 Antibody - middle region - Protein Information

Name Casp2

Synonyms Ich1, Nedd-2, Nedd2

Function

Involved in the activation cascade of caspases responsible for apoptosis execution. Might function by either activating some proteins required for cell death or inactivating proteins necessary for cell survival (PubMed:<http://www.uniprot.org/citations/7958843>)

target="_blank">7958843). Associates with PIDD1 and CRADD to form the PIDDosome, a complex that activates CASP2 and triggers apoptosis in response to genotoxic stress (By similarity).

Tissue Location

High level expression seen in the embryonic CNS, liver, lung, kidney, small intestine, and hair follicles of vibrissae Moderate expression seen in the skin, oral mucosa, skeletal muscle, submandibular gland and thymus. In the adult, it is highly expressed in spleen, lung and kidney. Moderately in the brain, heart, testis, liver Low levels in the thymus, skeletal muscle, ovary and gut
