

HOOK1 antibody - C-terminal region

Rabbit Polyclonal Antibody Catalog # Al14770

Specification

HOOK1 antibody - C-terminal region - Product Information

Application WB
Primary Accession O9UIC3

Other Accession NM 015888, NP 056972

Reactivity Human, Mouse, Rat, Rabbit, Pig, Horse,

Bovine, Guinea Pig, Dog

Predicted Human, Mouse, Rat, Rabbit, Pig, Chicken,

Horse, Bovine, Guinea Pig, Dog

Host Rabbit
Clonality Polyclonal
Calculated MW 80kDa KDa

HOOK1 antibody - C-terminal region - Additional Information

Gene ID 51361

Alias Symbol HK1, MGC10642

Other Names

Protein Hook homolog 1, h-hook1, hHK1, HOOK1

Format

Liquid. Purified antibody supplied in 1x PBS buffer with 0.09% (w/v) sodium azide and 2% sucrose.

Reconstitution & Storage

Add 50 ul of distilled water. Final anti-HOOK1 antibody concentration is 1 mg/ml in PBS buffer with 2% sucrose. For longer periods of storage, store at 20°C. Avoid repeat freeze-thaw cycles.

Precautions

HOOK1 antibody - C-terminal region is for research use only and not for use in diagnostic or therapeutic procedures.

HOOK1 antibody - C-terminal region - Protein Information

Name HOOK1 (<u>HGNC:19884</u>)

Function

Component of the FTS/Hook/FHIP complex (FHF complex) (PubMed:18799622, PubMed:32073997). The FHF complex may function to promote vesicle trafficking and/or fusion via the homotypic vesicular protein sorting complex (the HOPS complex) (PubMed:18799622). FHF complex promotes the distribution of AP-4 complex to the perinuclear area of the cell (PubMed:<a

href="http://www.uniprot.org/citations/32073997" target="_blank">32073997). Required for spermatid differentiation. Probably involved in the positioning of the microtubules of the manchette and the flagellum in relation to the membrane skeleton (By similarity).

Cellular Location

Cytoplasm. Cytoplasm, cytoskeleton. Note=Localizes to punctate cytoplasmic foci which do not appear to overlap with early or late endosomes, the endoplasmic reticulum, multivesicular bodies (MVBs), lysosomes, or mitochondria (By similarity). Often found in close association with microtubules (By similarity). Does not associate with the Golgi complex. During spermiogenesis, it localizes to the manchette in spermatids from steps 8-10. It is also present between the microtubule manchette and the nucleus. During manchette elongation, it is preferentially localized to the nuclear ring of the manchette, whereas the strong localization to the manchette decreases. In more mature spermatids, while the manchette migrates posteriorly, it localizes to punctuates spots. At later stages of spermatid differentiation, the punctuate expression pattern is found at both the attachment site and the proximal end of the elongated manchette. In contrast, it is not present in mature spermatozoa (By similarity) {ECO:0000250|UniProtKB:Q8BIL5}

HOOK1 antibody - C-terminal region - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- Cell Culture

HOOK1 antibody - C-terminal region - Images

WB Suggested Anti-HOOK1 Antibody Titration: 1.0 μg/ml

Positive Control: Fetal Heart
